

UI/UX Design

Portfolio. 2024

Josh Richardson

Get started

Hi, I'm **Josh**.

I'm an industrial design graduate from Brighton who's looking to pursue a career in the **UI/UX design industry**.

This portfolio aims to showcase the **different stages** of my **design process**, while rationalising my **decision making** along the way.

2020

Bronze Award

Starpack Student Awards

Skills.

Software: Photoshop | Illustrator | InDesign | After Effects | Figma | WordPress | Wix | Keyshot | Solidworks | Microsoft Office | Google Suite

Design: User Research | Wireframing | Prototyping | User Testing | Graphic design | Branding | CAD Modelling | Digital rendering | Print material | Client communication | CSS

My Projects.

A collection of projects I've completed through freelance work and as part of university coursework.

Industrial & UI/UX Design
InfraLite

UI/UX Design
Meal Deal

Web Design
Breathe Pilates

Web, UI/UX & System Design
Other Projects

01. InfraLite

To design a product to aid the prevention & recovery from sport related injuries in home environments.

A compact, wearable product which aids the prevention and self-recovery from sports related injuries through quick and unobtrusive hands-free treatments, while either at home or on the move.

8 months

Solo

Project inspiration.

The inspiration for my final year major project came from my own personal experiences of struggling with injuries and setbacks while exercising and playing sport. Suffering with pain during and after playing sport or going to the gym left me frustrated and having to stop exercising resulting in losing both my fitness and progress.

Researching the problem.

With the growing emphasis on how important exercise is for our health & well-being, around **20% of all GP consultations** and **over 1.5 million visits to A&E** are the result of **musculoskeletal injuries** from active lifestyles.

With the **average physiotherapy session** now reaching **upwards of £75**, the costs and inconveniences associated with regular specialist treatments has resulted in **self-rehabilitation & injury prevention products** becoming **more desirable to consumers**.

My solution.

InfraLite combines doses of both **red & infrared light** to **promote blood flow** and **initiate natural healing processes** within the body, reducing injury recovery time and getting users back on track faster. It's ideal for **warming up parts of the body** before working out, helping **prevent recurring problems**, as well as enhancing **post session recovery**.

It's **unobtrusive technology** makes it suitable for treating a **vast range of injuries** anywhere from bruising, pulled muscles to deeper joint pains that **can't be treated by traditional sports recovery products** such as massage guns.

Understanding types of users.

User profiles.

1.

The 'fed-up injury sufferer'

"Incredibly frustrated with an injury right now"

Goal: To speed up the recovery process and get back to normal.

The 'annoyed progress loser'

"I've lost pretty much all progress I've ever made"

Goal: Limit the amount of lost progress and build back strength.

The 'post injury worrier'

"I'm extremely anxious about getting injured again"

Goal: Enhanced warm up & recovery to restore confidence.

01. Ideation

I began by sketching initial ideas & concepts with a range of application methods including **handheld**, **self-standing** and **wearable devices** which all possessed various advantages & disadvantages.

02. Product Development

The aesthetic I wanted to incorporate was a **combination of sports tech & home electronics** so the device didn't look out of place in a family home.

A **product disassembly** helped me identify key components as well as better understand their sizing & manufacture.

03. Modelling & Prototyping

Various stages of **iterative 3D printing** helped to improve the **functionality** of the magnetic strap attachment, **interface positioning/arrangement** and **overall product form**.

User testing & key features.

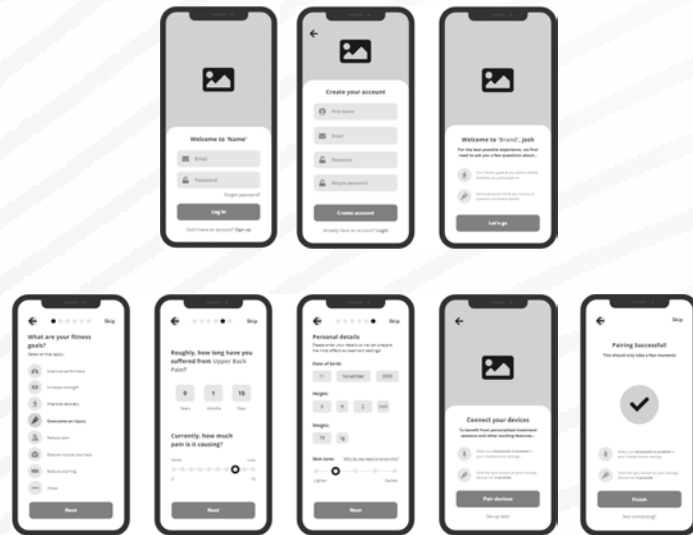

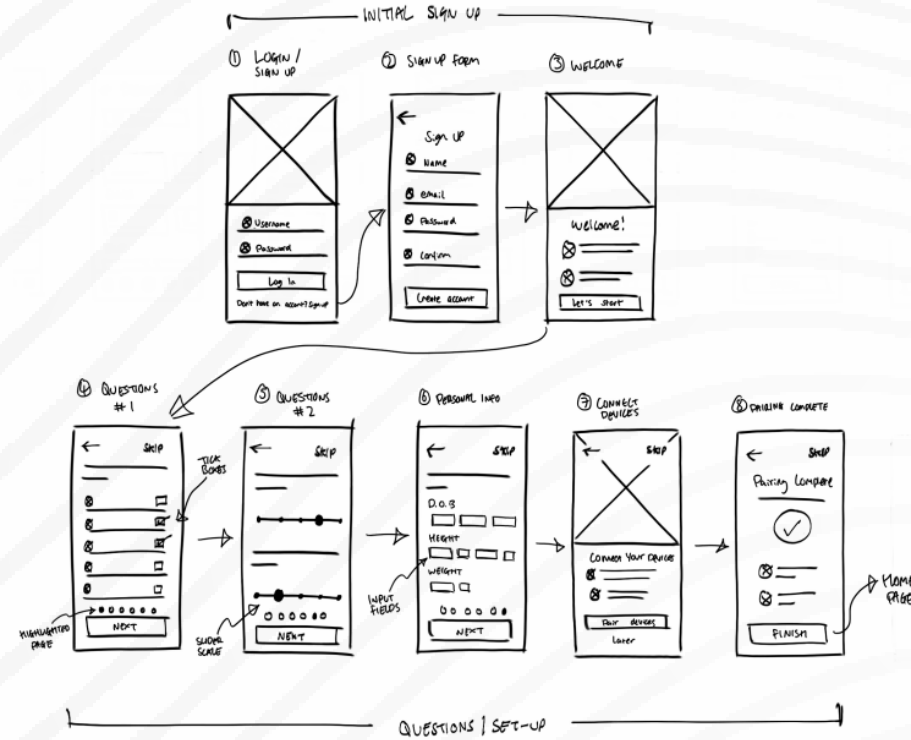

2 stages of user testing was carried out by a total of 8 participants to understand how users **intuitively** used the product **without instructions**, and afterwards being provided a **step-by-step walkthrough**.

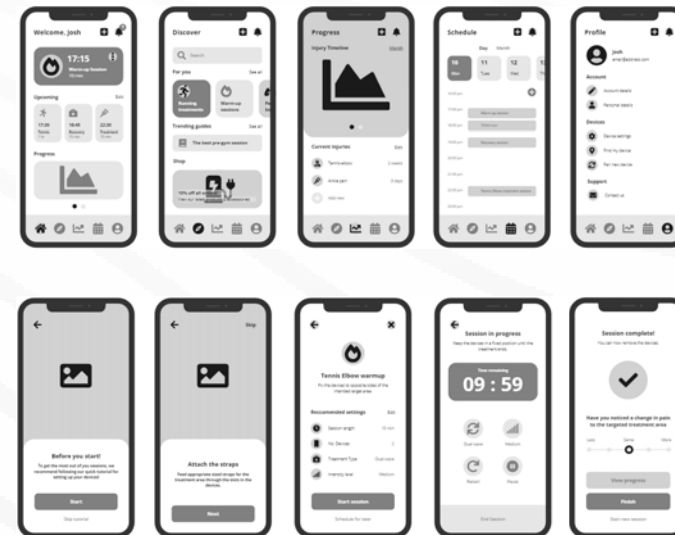

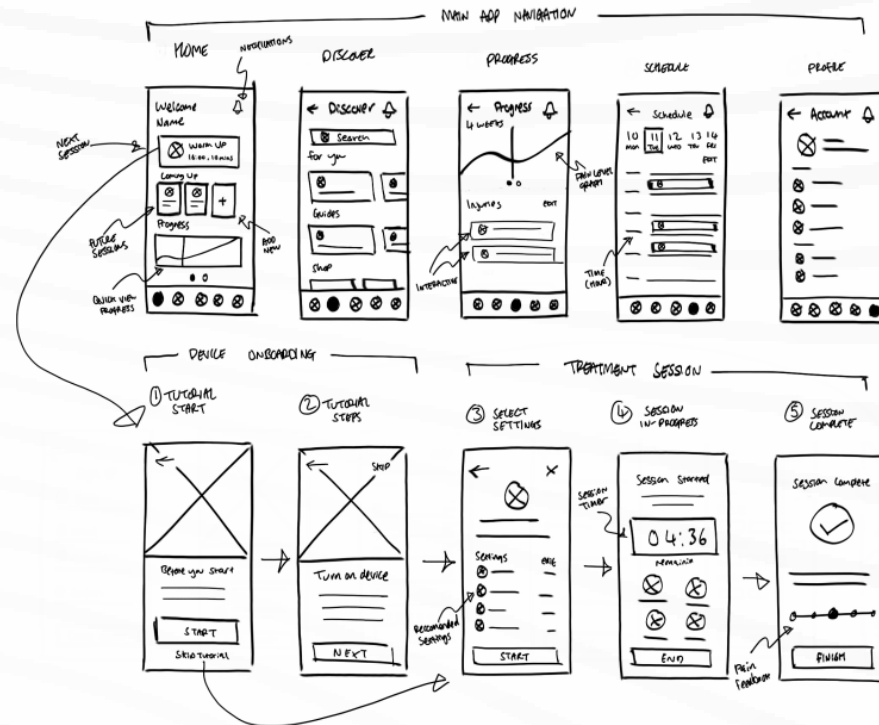

Initial wireframing.

An app was developed to enable users to **generate personalised injury specific recovery plans** as well as **controlling the device** in case the device interface is hard to access during treatments (e.g. on the lower back).

Onboarding flow

Homepages & treatment flow

Defining key task stages:

01

Initial onboarding

- Create account
- Determine user goals
- Establish injury concerns
- Personal details
- Pair devices

02

Treatment planning

- Generate injury specific treatment plans
- Schedule treatments
- Session notifications

03

Treatment session

- Instructions walk-through
- Session device settings
- Digital device controls
- Session timer

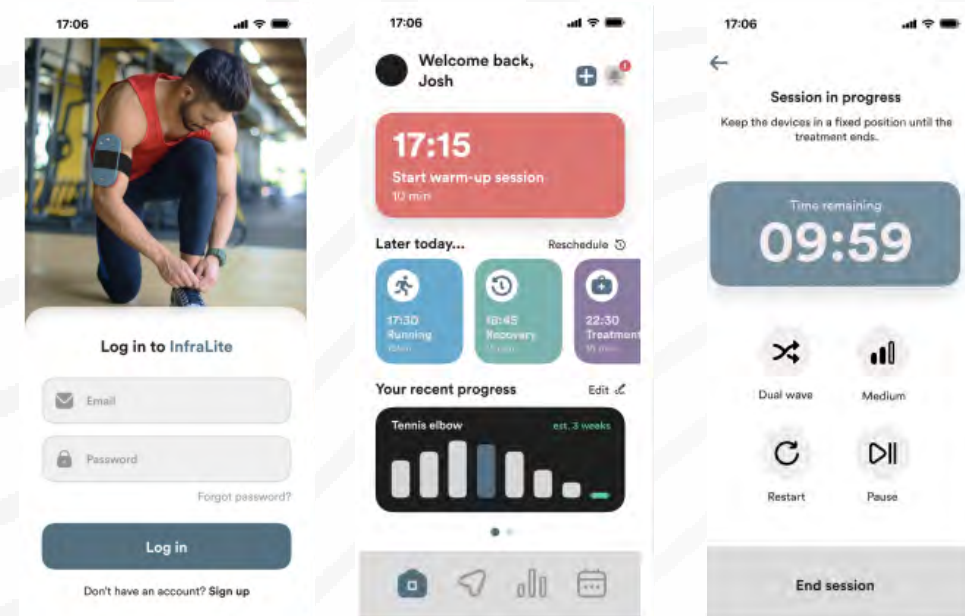

04

Post session

- Injury status feedback
- Adapt treatment plan
- Future treatment settings
- Display next session time

App development.

A review of my current design helped highlight any potential improvements to my current design including **aesthetics, wording and navigation.**

UI/UX Improvements.

Login page:

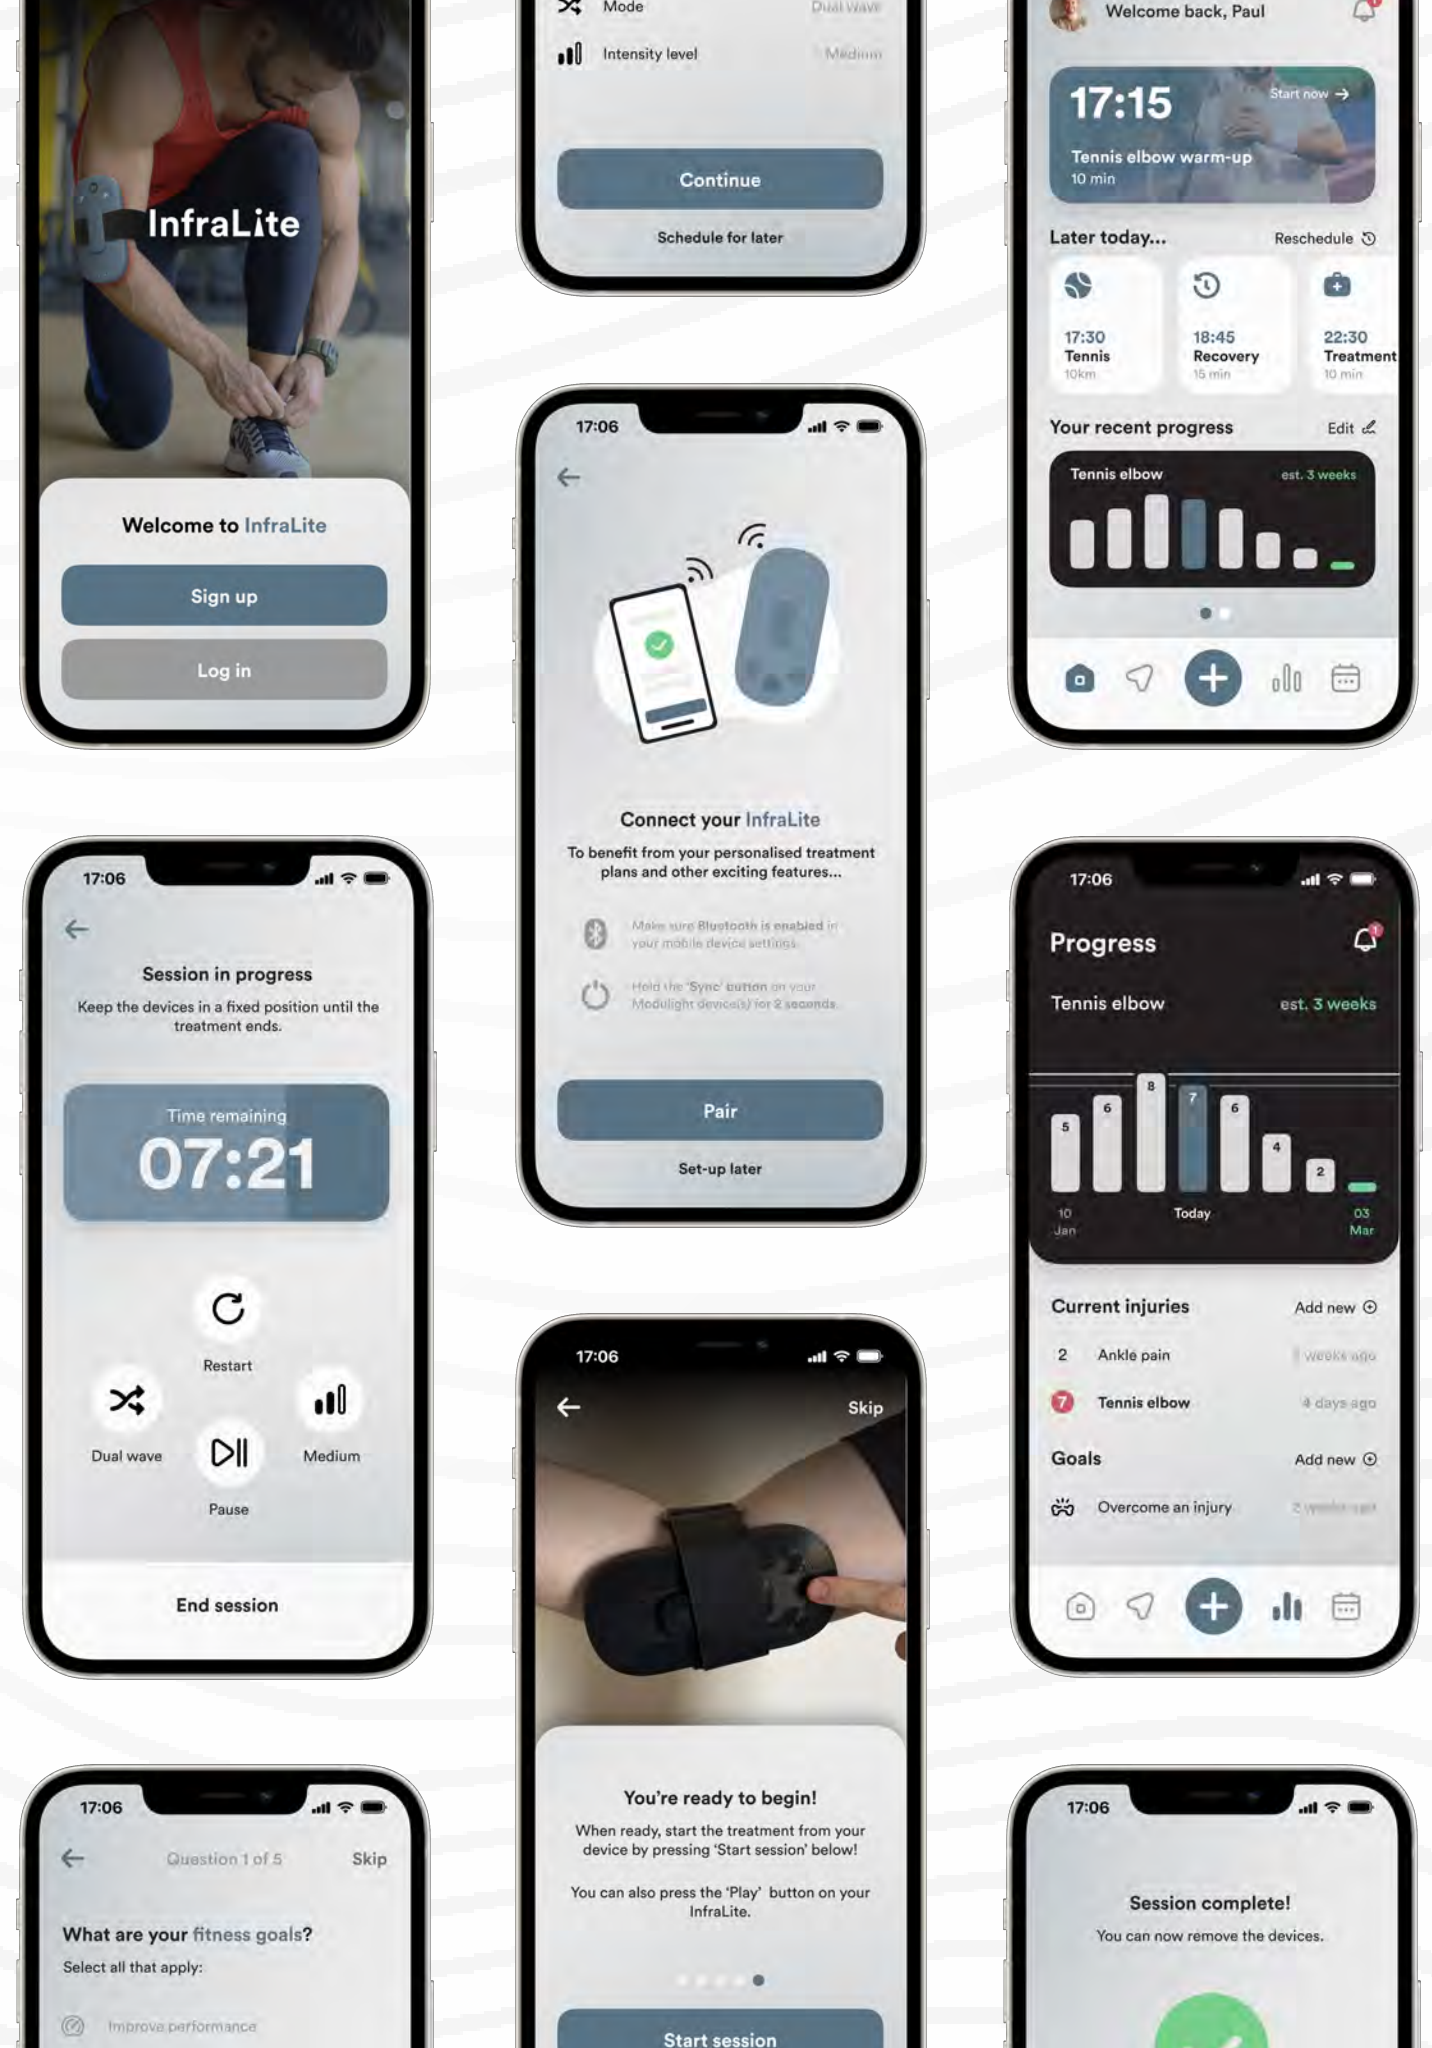

Branding made more prevalent as well as prioritising sign ups due to biometrics automatically logging users in.

Homepage:

The 'new session' button is now located on the navigation bar for ease of access. 'Start now' added to make it more obvious that the treatment tile is interactive.

Treatment controls:

The UI now replicates the button layout on the physical product, allowing user to make the association between the app and product controls.

Product visualisations.

02. Meal Deal

“Design an app to enhance the experience of reducing domestic energy usage.”

Meal Deal is an app that aims to bring busy families together through shared meals while passively and unconsciously reducing domestic energy usage.

This project consisted of a group research phase, and a solo design & project delivery phase.

3 months

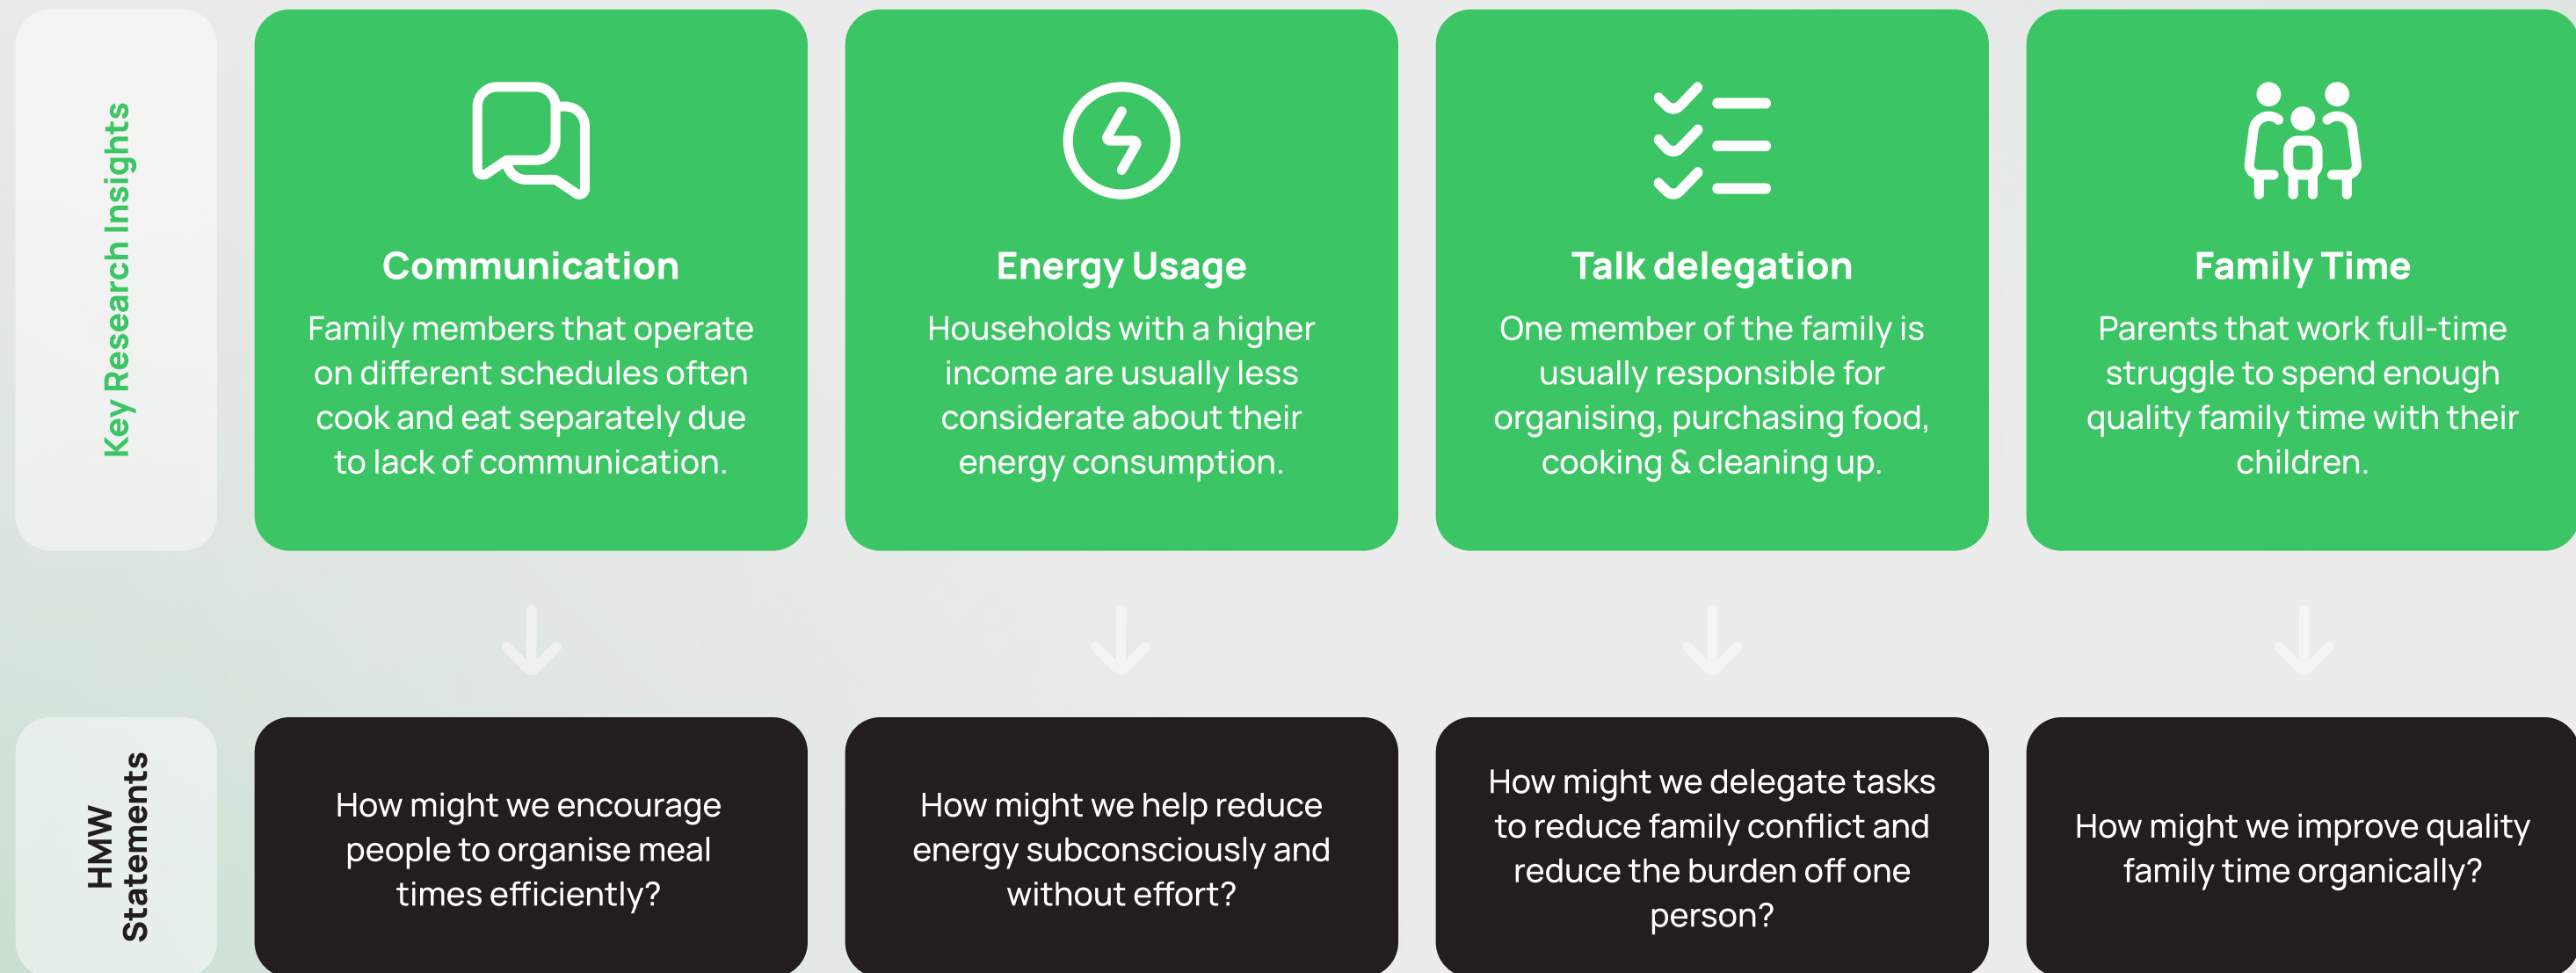

Group & solo

Understanding potential users.

Initial secondary research was carried out to explore **problems within domestic households** which **weren't directly related to energy consumption**. This would allow a solution to appeal to users by **addressing a more personal issue** in order to **subconsciously reduce their energy consumption**.

Hunt statement:

“We are going to research **improving quality family time through sharing meals** in order to enhance the experience of domestic energy reduction for **families who's parents both work full-time**.”

Monica Wilson

 43 y/o

 Guilford, Surrey

 Senior Partner at Marketing Firm

“I feel guilty sometimes, but I know that my work is important too. It’s about finding the right balance.”

Developing a **user persona**.

By creating a detailed user persona, the users primary **wants & needs** can be identified in order to create a solution that meets a user’ **expectations** and **requirements**.

Background. What is Monica’s daily life like?

Monica has worked at a Marketing firm for the last 7 years and her schedule requires her to work more hours and needs to be contacted throughout the weekends. She commutes an average of an hour a day into London. She likes to stay organised and regularly plans out her schedule in advance, however is aware she doesn’t spend enough time with her daughter who is at school. With Monica and her husband Richard both working time insensitive, high paid roles, the cost of domestic energy isn’t a true concern for them.

Pain Points. What frustrates Monica the most?

- Limited quality family time
- Often eats convenient but unhealthy food
- Cooking & washing up is always left to her
- Rarely eats meals as a family
- Each household member has differing schedules
- Regularly has to cook or serve multiple meals at different times

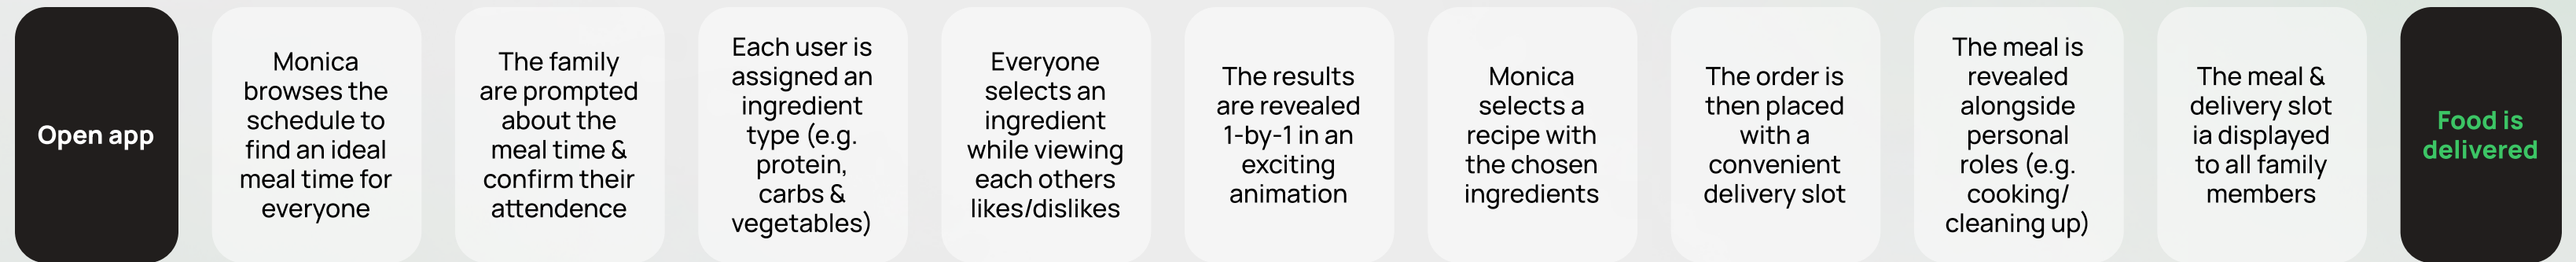

End goals. What could the solution help to achieve?

- Spend more time with her daughter and husband
- Family to become less reliant on her
- To create a relaxing environment at home
- To do these things whilst not infringing on her work schedule

Project proposal. Inclusive, convenient & engaging

An app which aims to **bring busy families together** by improving quality family time through **cooking exciting new meals together**. The app helps families understand each others schedules to find suitable times for a family meal, then utilises a fair ingredient voting system to select a recipe and deliver the ingredients straight to the family home. Specific tasks are delegated to each individual which suits their schedule, and **passively reduces domestic energy usage** by **eliminating the need to cook multiple meals** at dinner time.

User task flow.

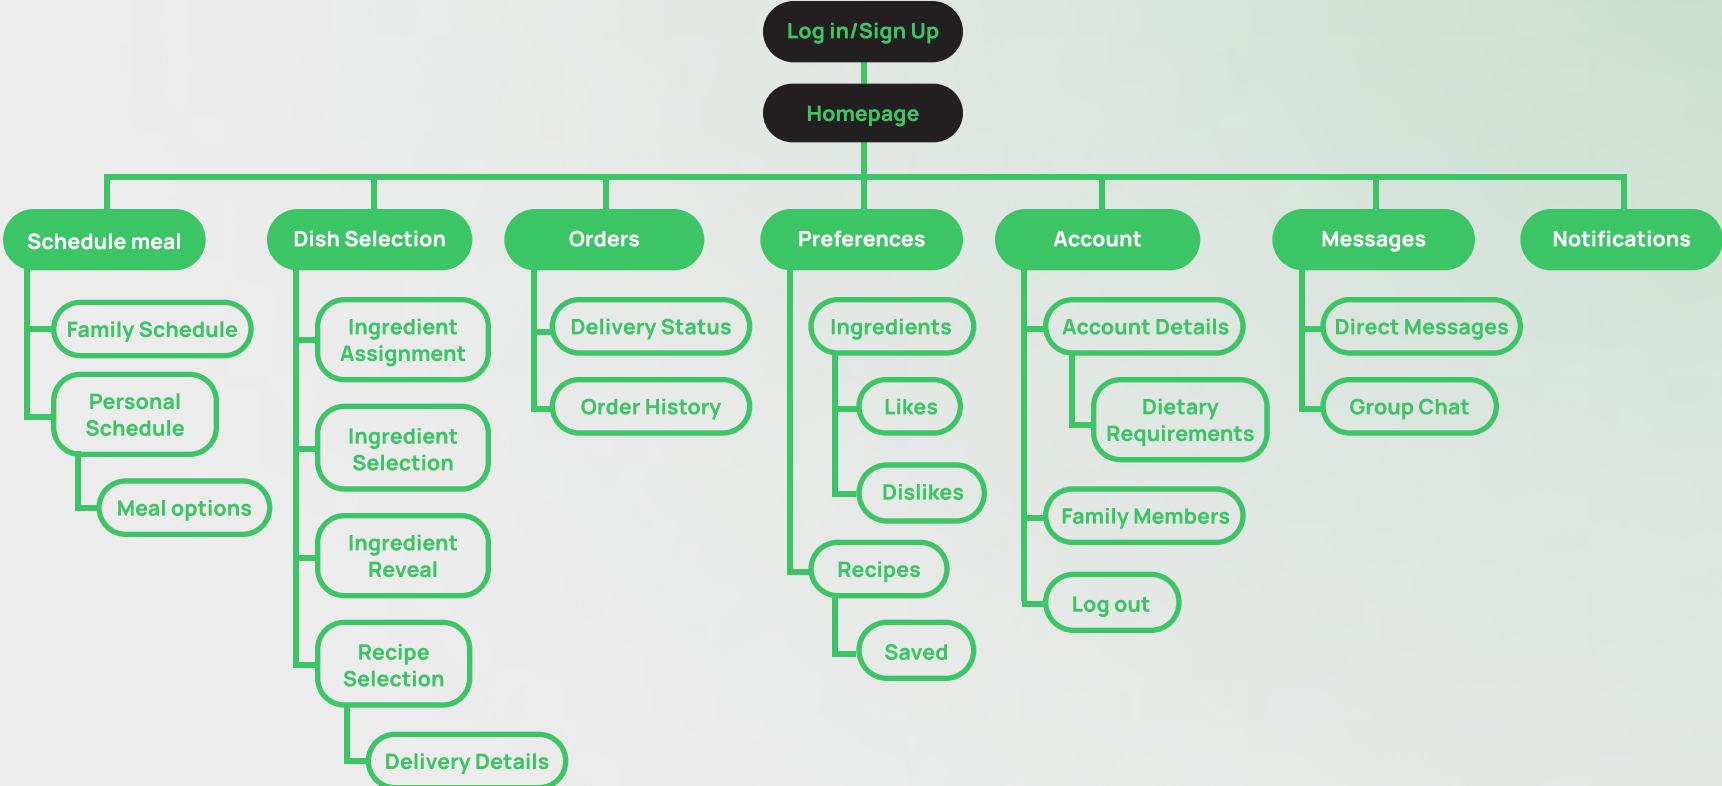

Concept development.

Creating a Sitemap.

The sitemap has been structured to **prioritise the most important features** in terms of **importance, accessibility and frequency of use**. The first task to complete is scheduling a meal, as without it most of the other **features become redundant**, so it's been prioritised on the sitemap and homepage.

Iterative wireframing.

Through multiple stages of wireframing and interactive prototype testing, some parts of the app were **redeveloped** to help **simplify the user task flow** and layout changes were made for **improved navigation** after a better understanding of **intuitive user behaviour**.

[a] Homepage 1 [b] Schedules [c] Meal options [d] Homepage 2 [e] Ingredient selection [f] Notification [g] Ingredients reveal [h] Recipe selection [i] Delivery options [j] Homepage 3

Aesthetic Direction.

Meal Deal encompasses a slick black and green aesthetic to evoke feelings of **health, positivity** and **sophistication**. Green is also associated with **luck**, which suits the various randomised features and **playing card theme** of the app. The app utilises bold contrasting colours and elevated shadows to create a **clear visual hierarchy**, which **enables understanding** of key interactive elements that are essential for a **seamless user experience**.

Meal Deal

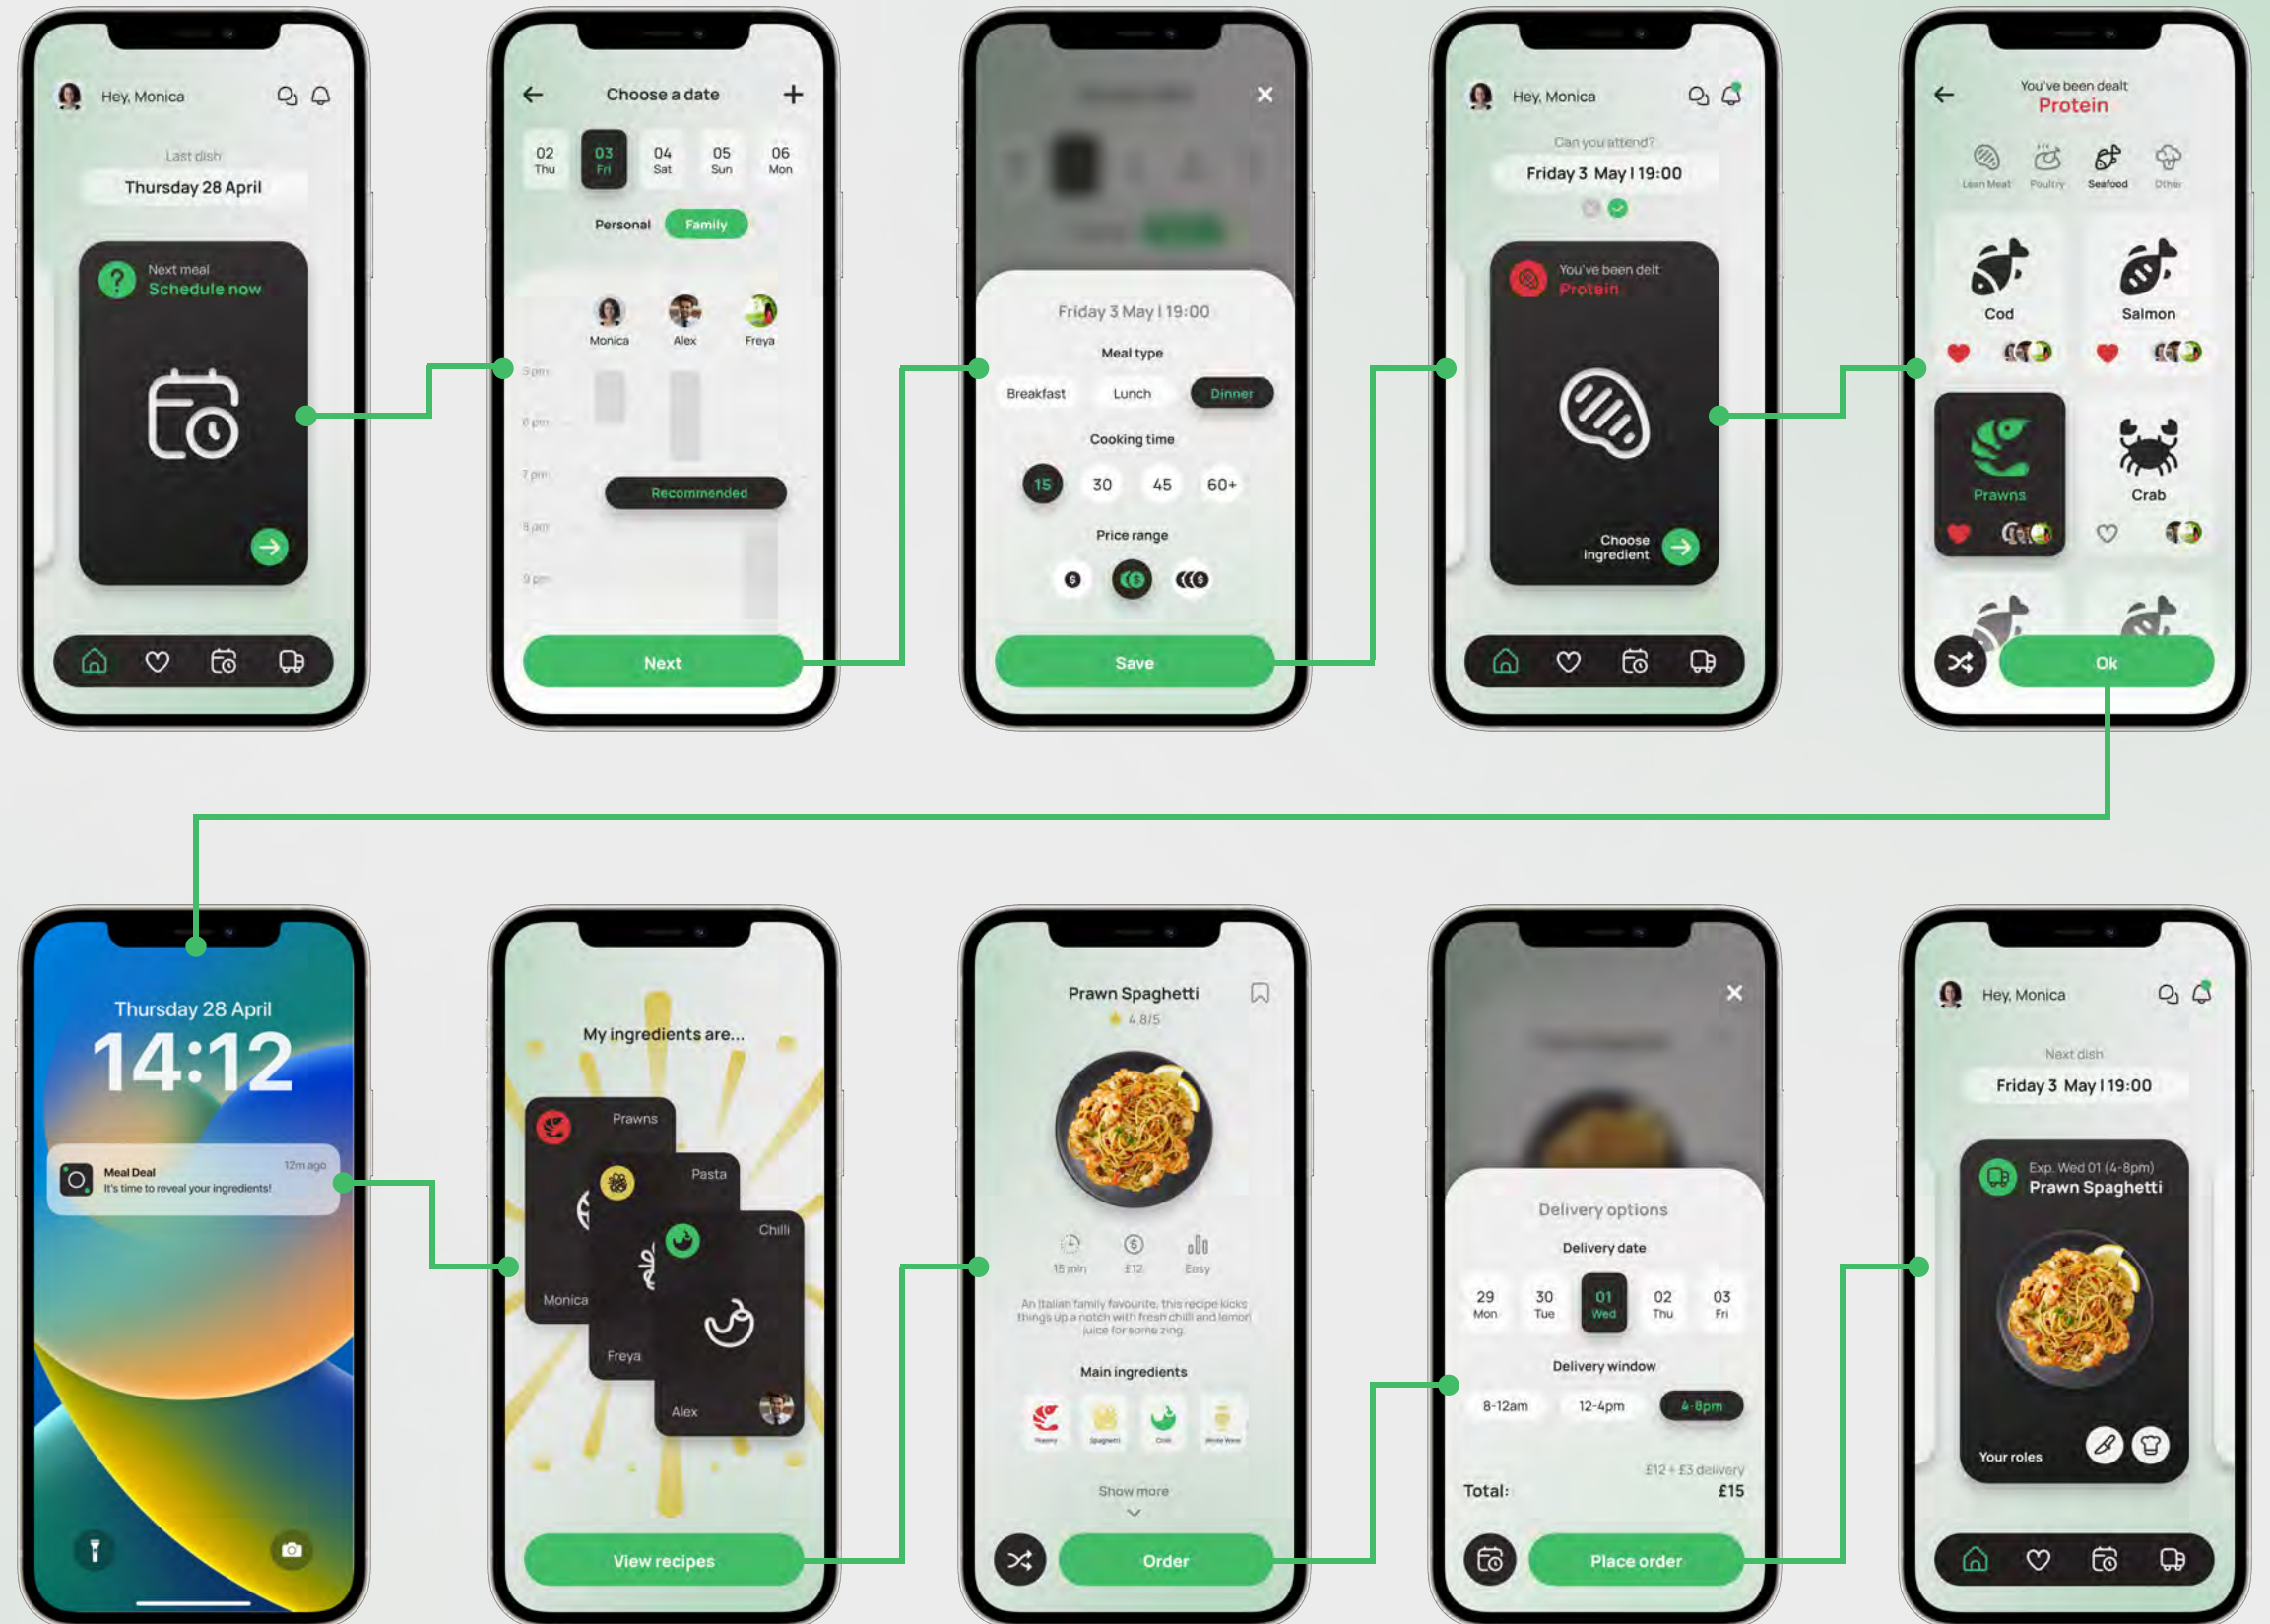

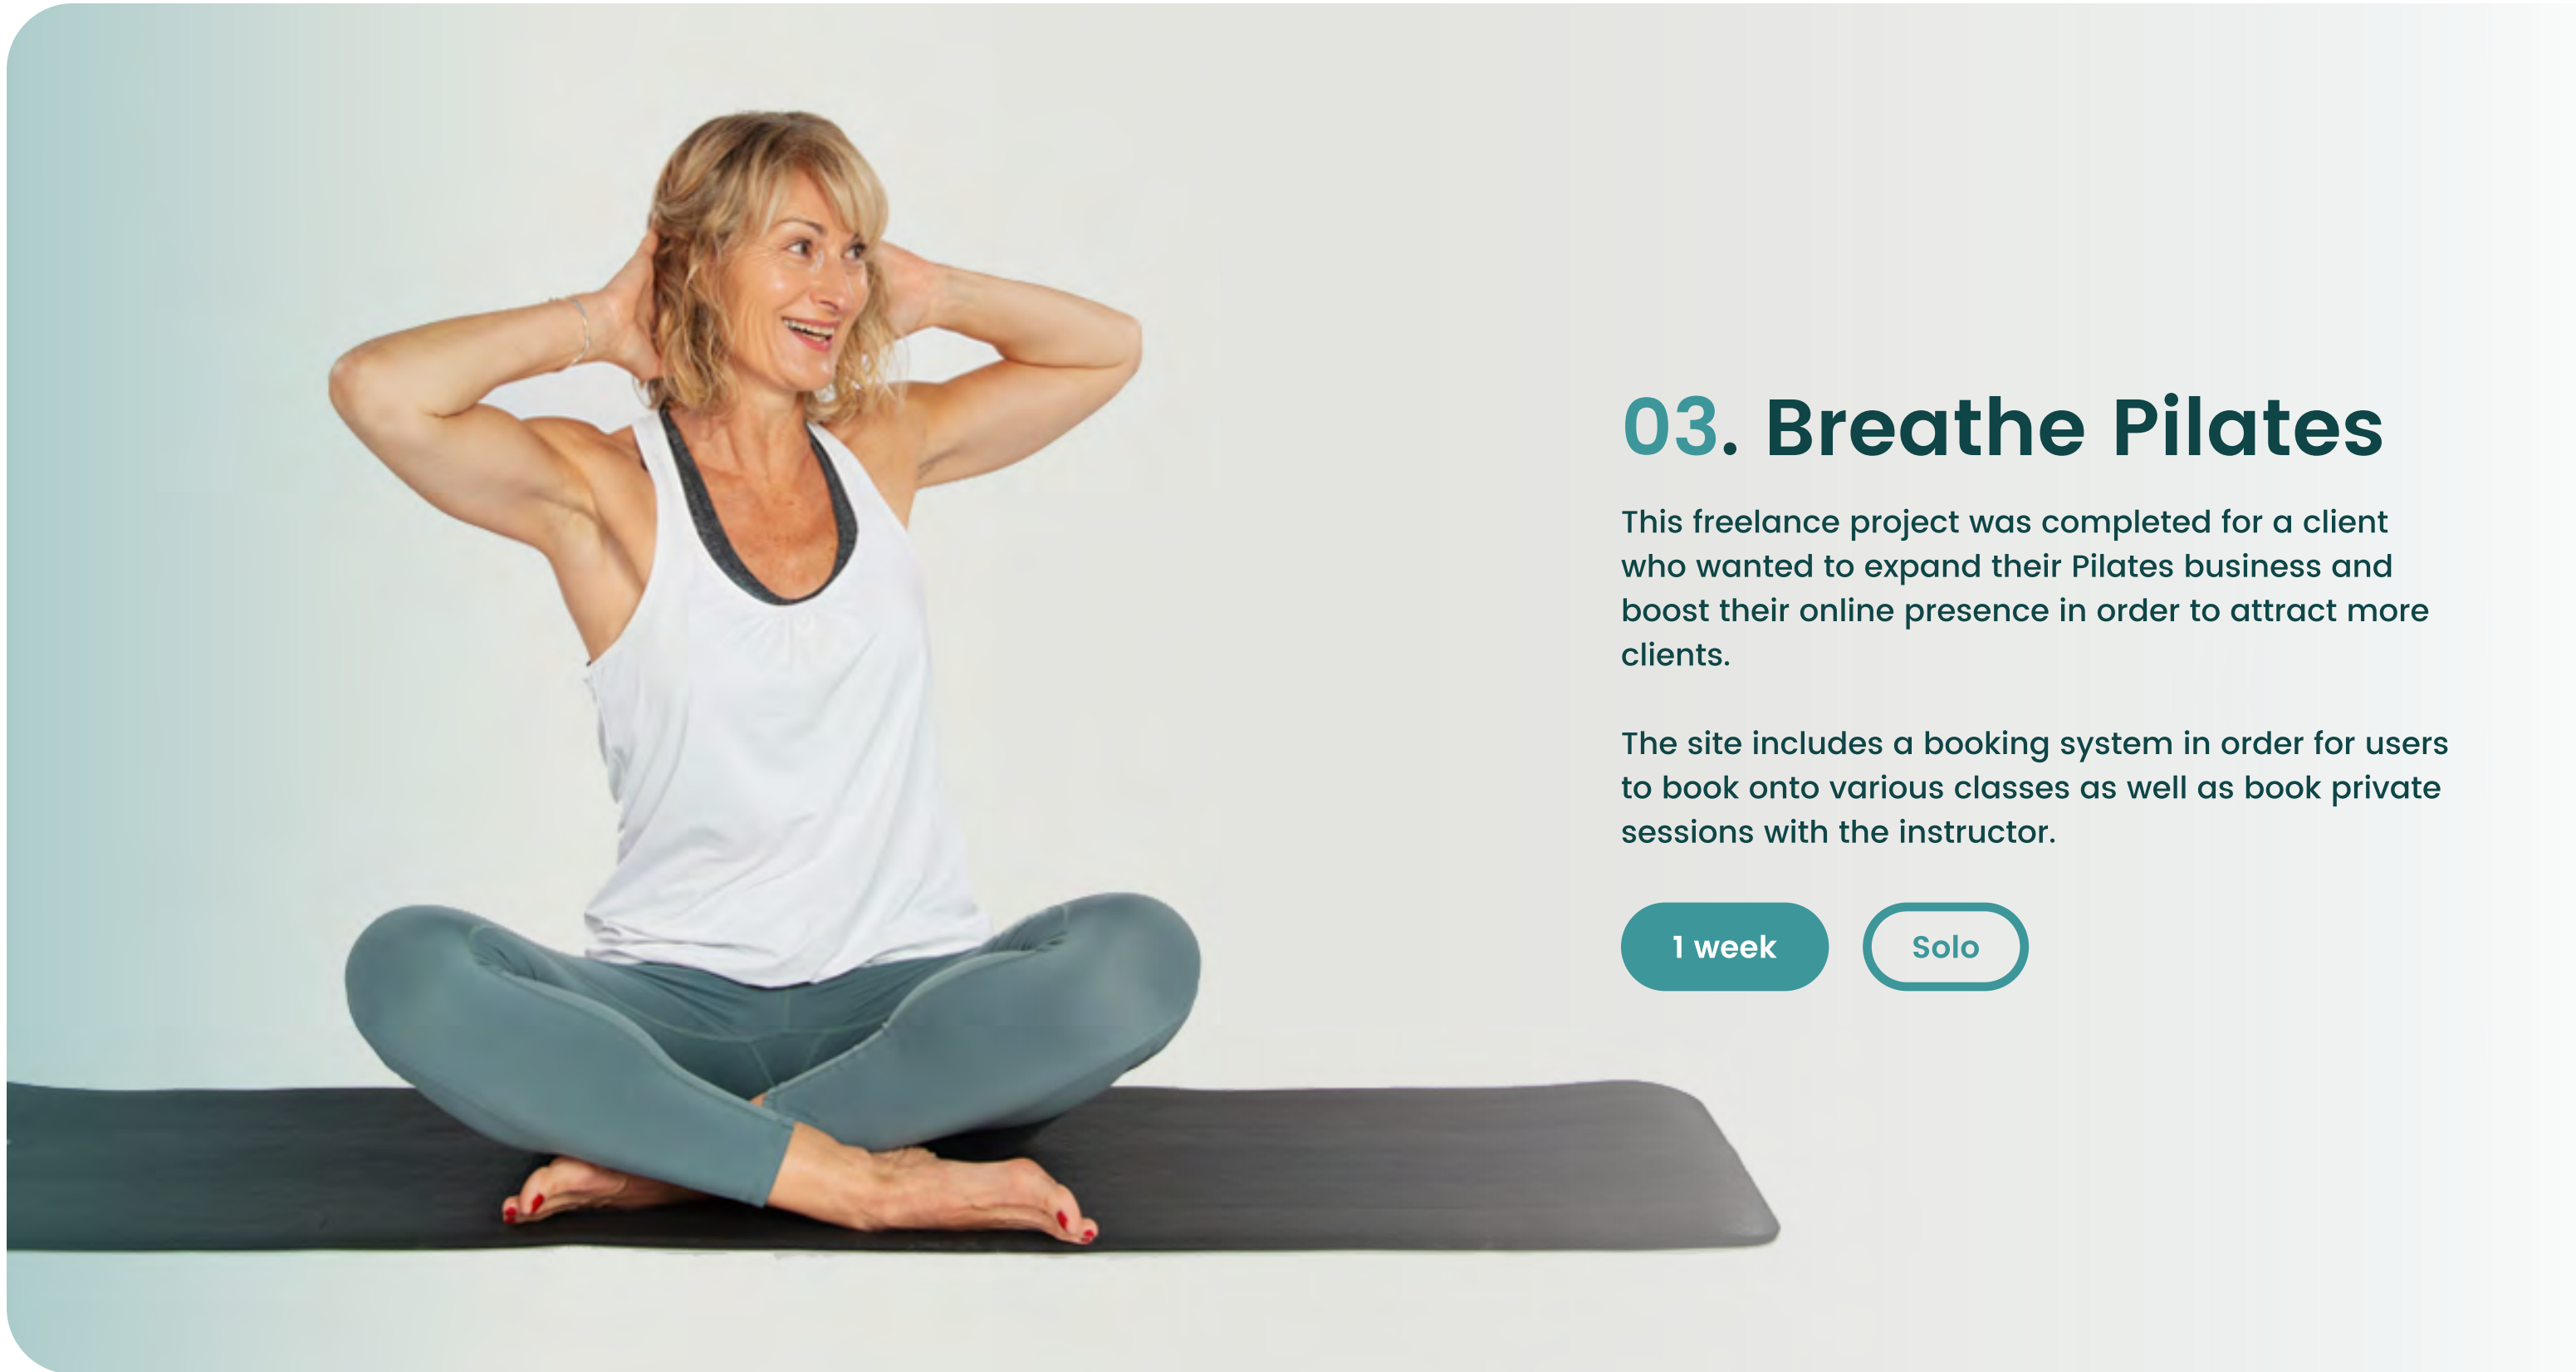

Dish Deal is an exciting yet effective solution for bringing busy families together to enjoy something we all love, food!

With Dish Deal, everyone has as say! Effortlessly organise meals with your favourite ingredients and people, as well as allowing everyone to get involved. You can even shuffle through new recipes with ingredients that everyone in the family will enjoy. We'll deliver your healthy yet tasty ingredients straight to your door with the tap of a button, its really never been easier.

So what are you waiting for? Play your hand today!

Download

03. Breathe Pilates

This freelance project was completed for a client who wanted to expand their Pilates business and boost their online presence in order to attract more clients.

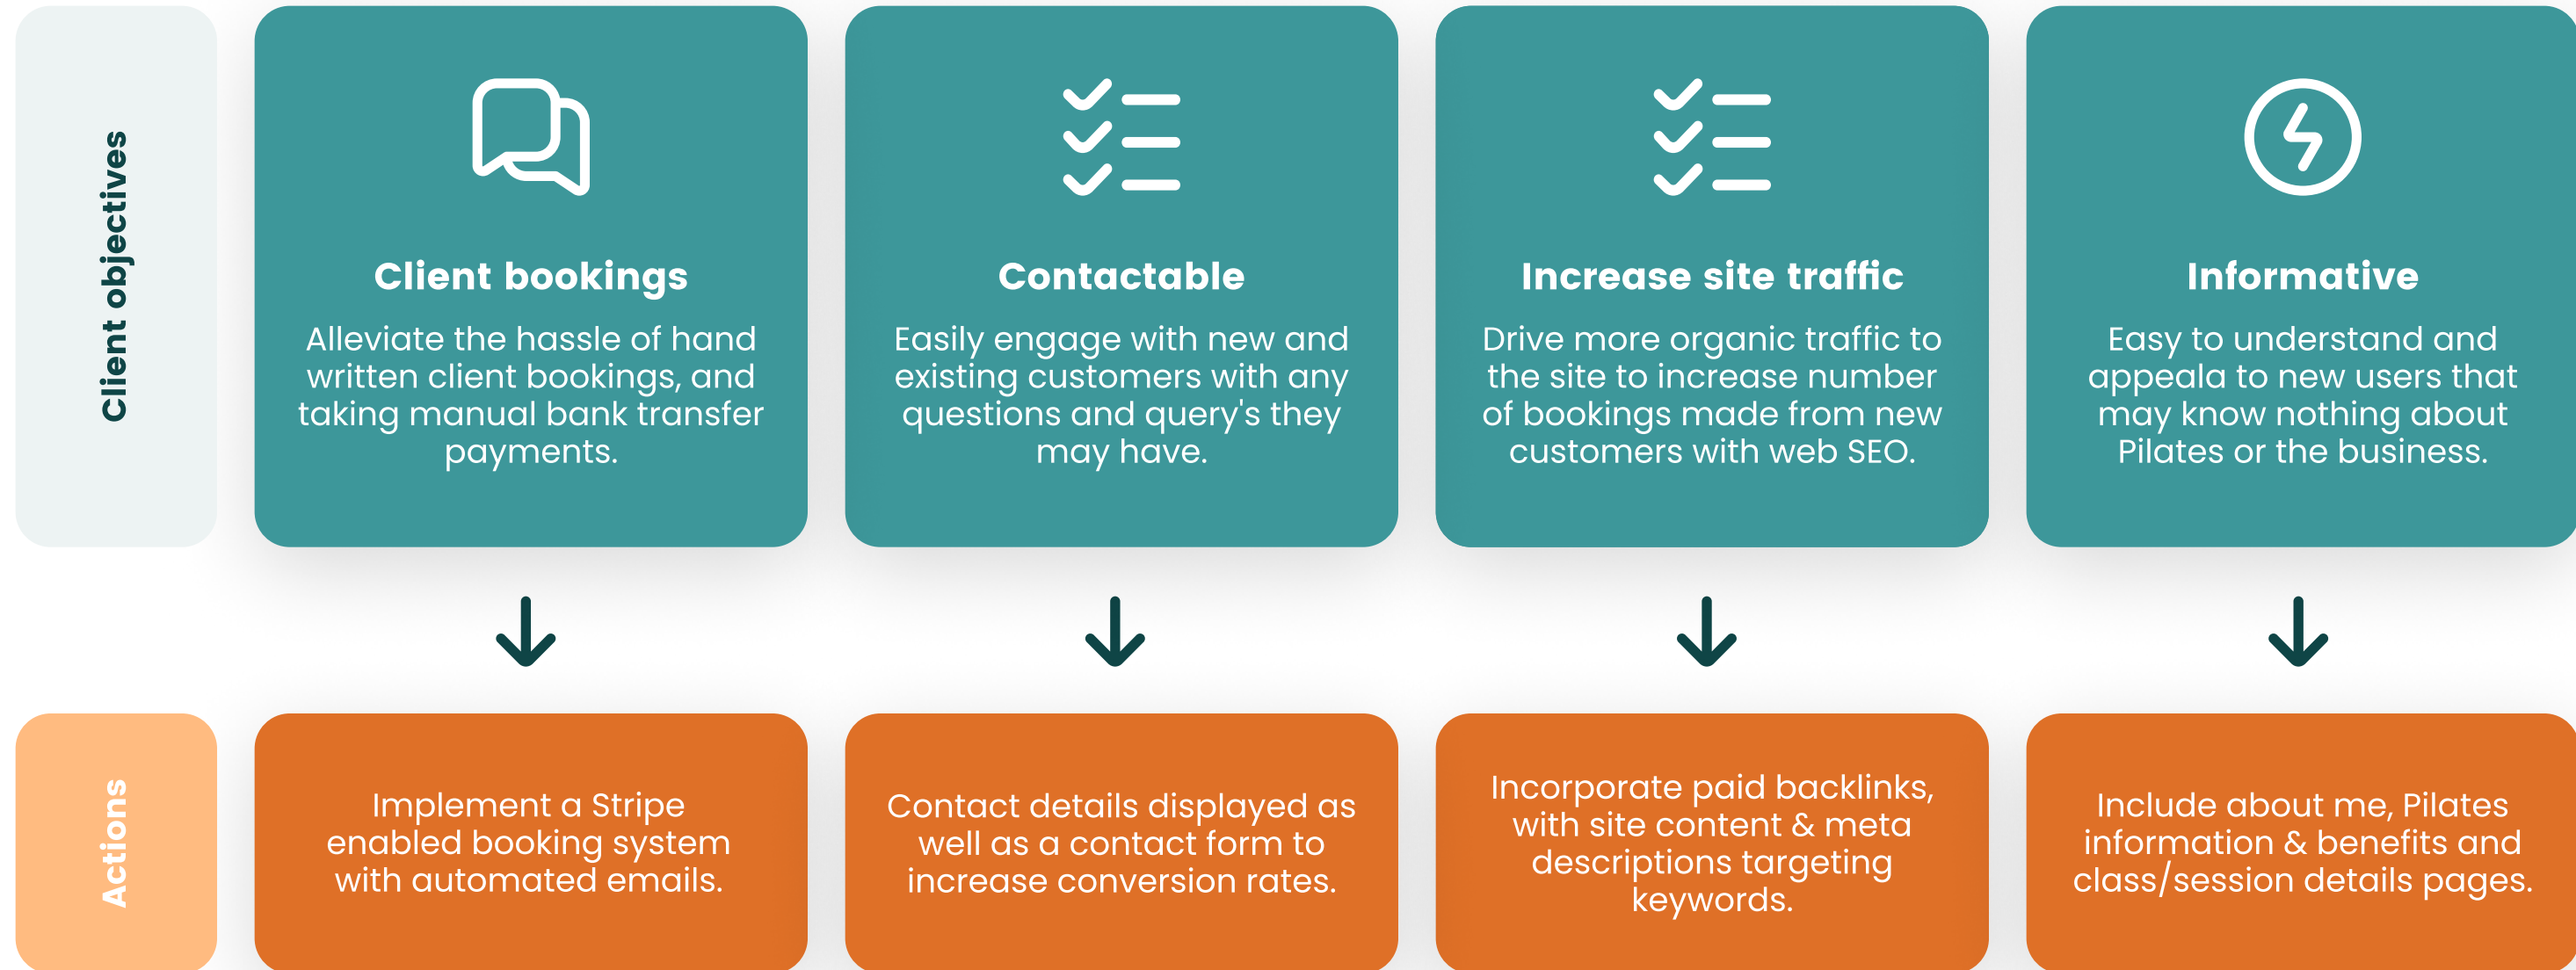

The site includes a booking system in order for users to book onto various classes as well as book private sessions with the instructor.

1 week

Solo

Establishing client expectations.

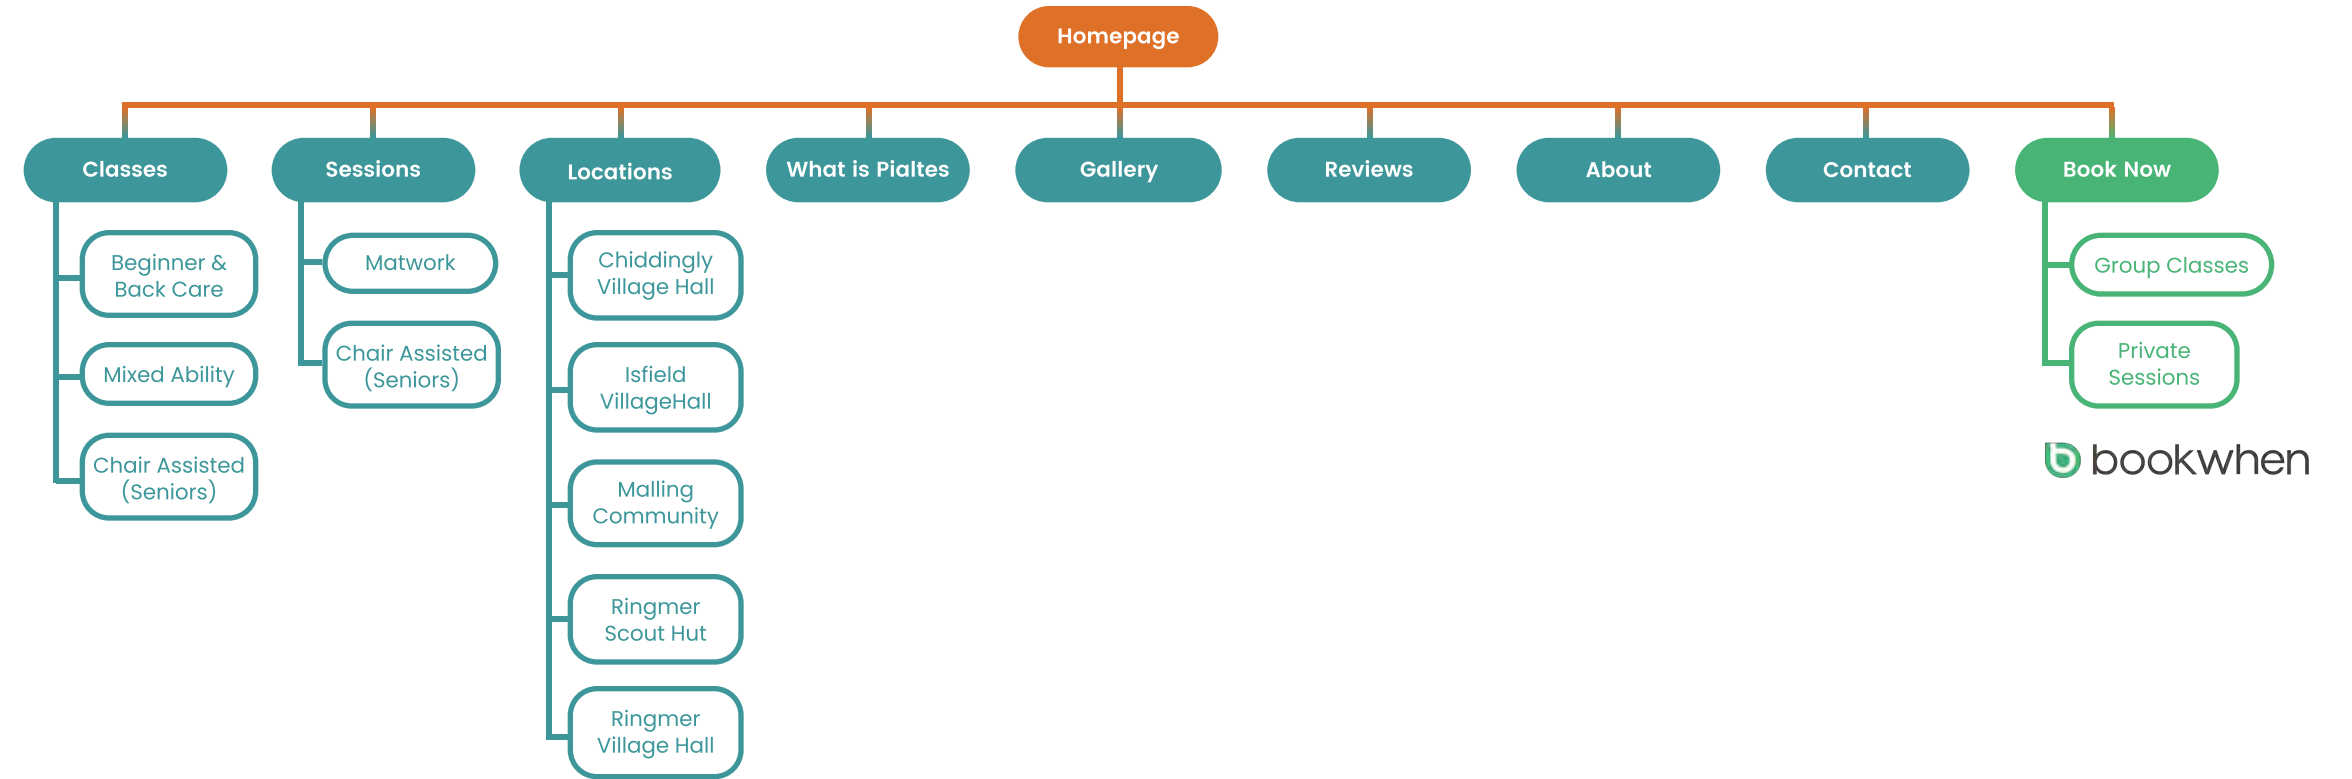

It's important to understand the project objectives in order to deliver a product that suits the clients and users needs.

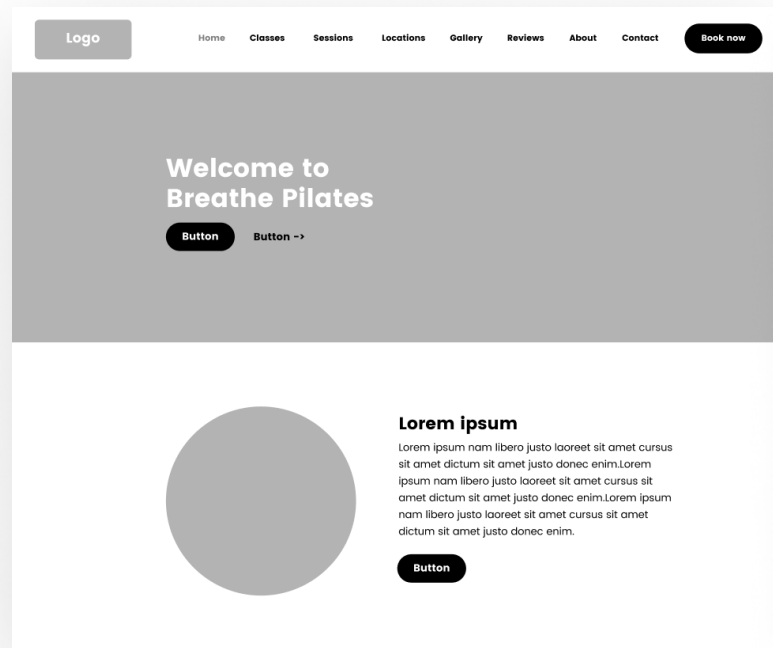

Planning phase.

By using Figma, iterative page layouts and section templates could be generated from the sitemap.

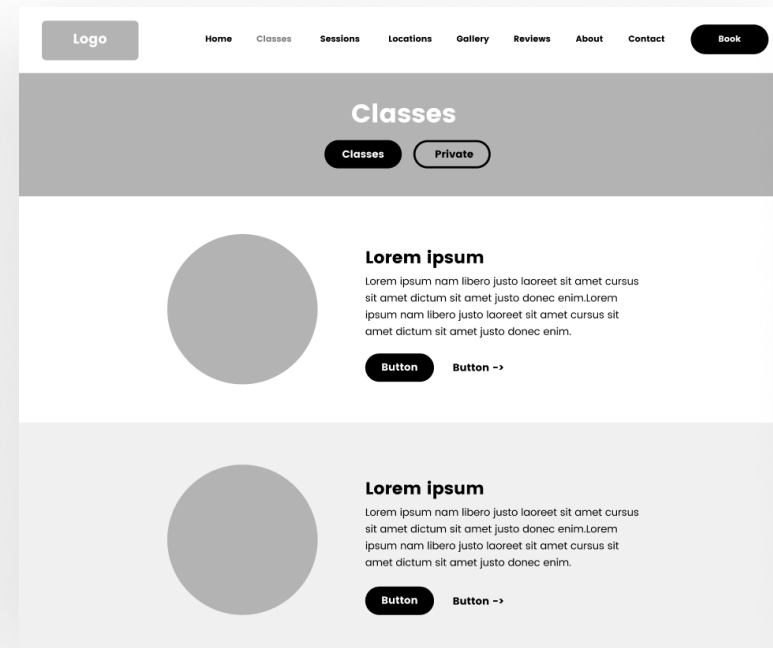

Mid-fidelity wireframes were created in **greyscale** so that the content & interface could be examined from a **UX perspective**, rather than a UI perspective.

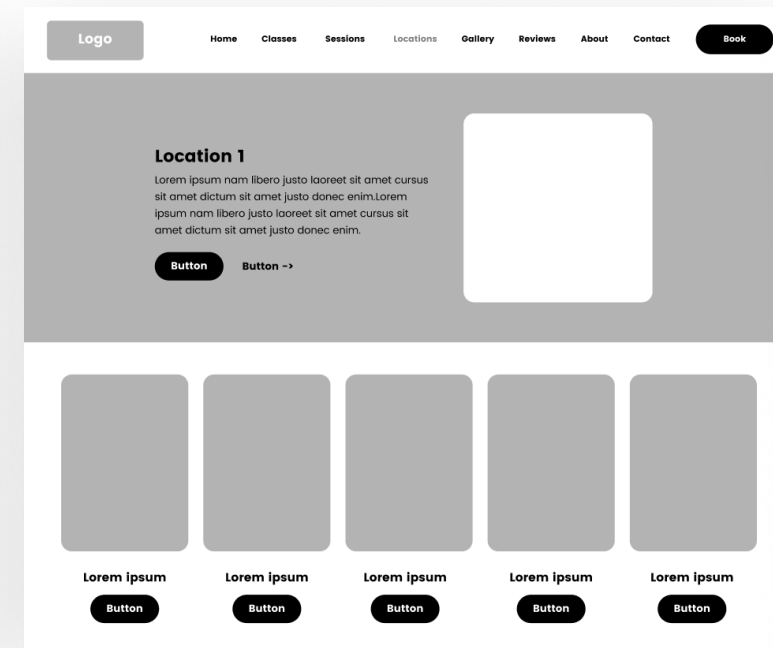

Homepage

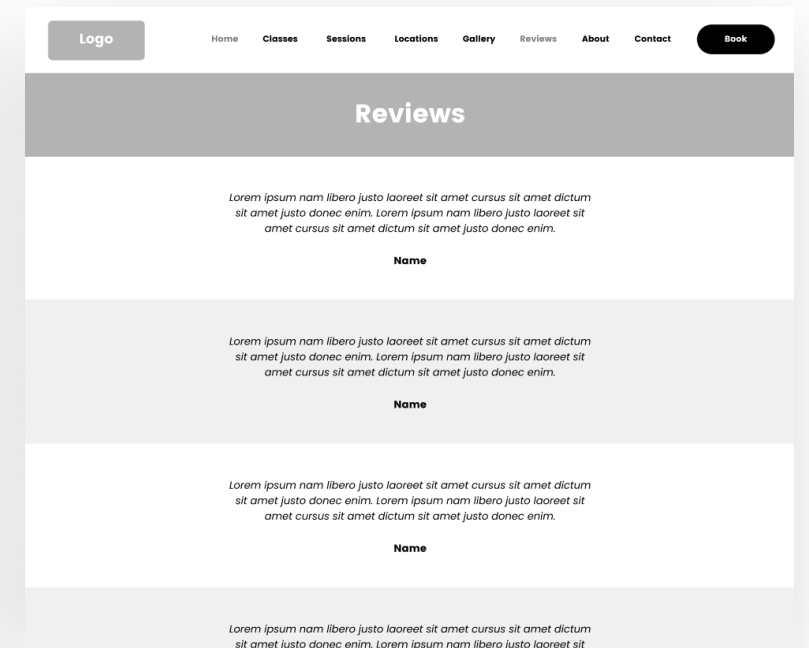

Classes

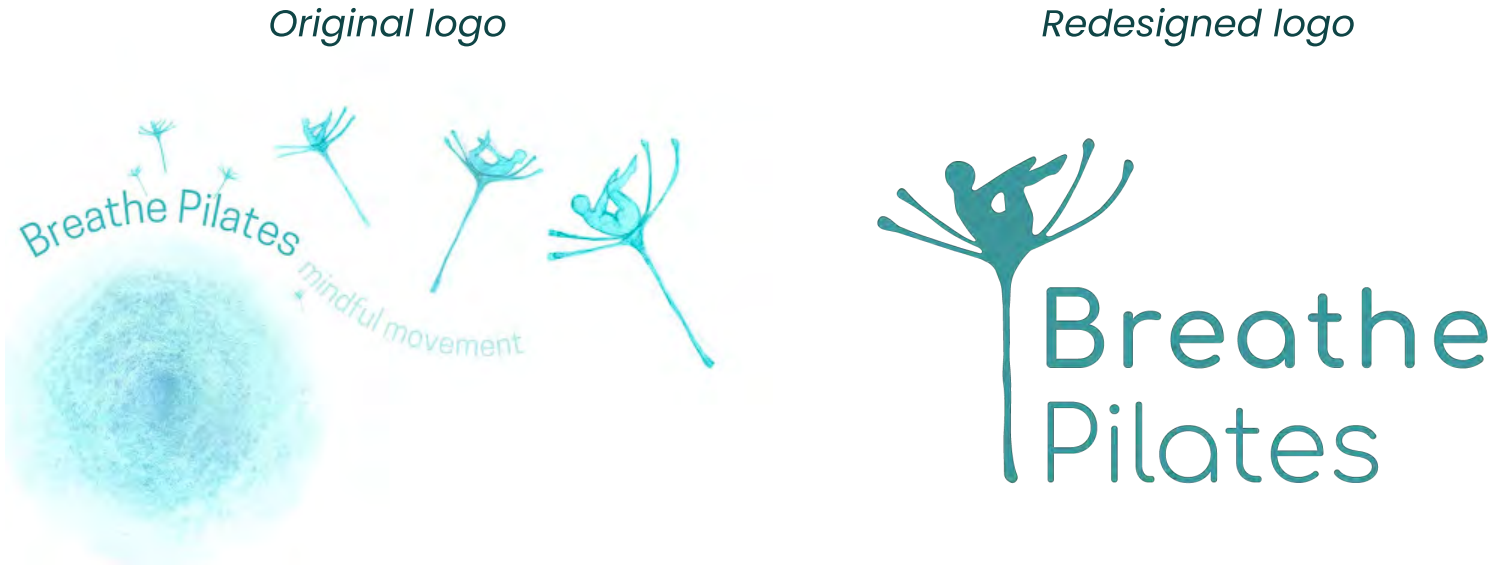

Class location 1

Reviews

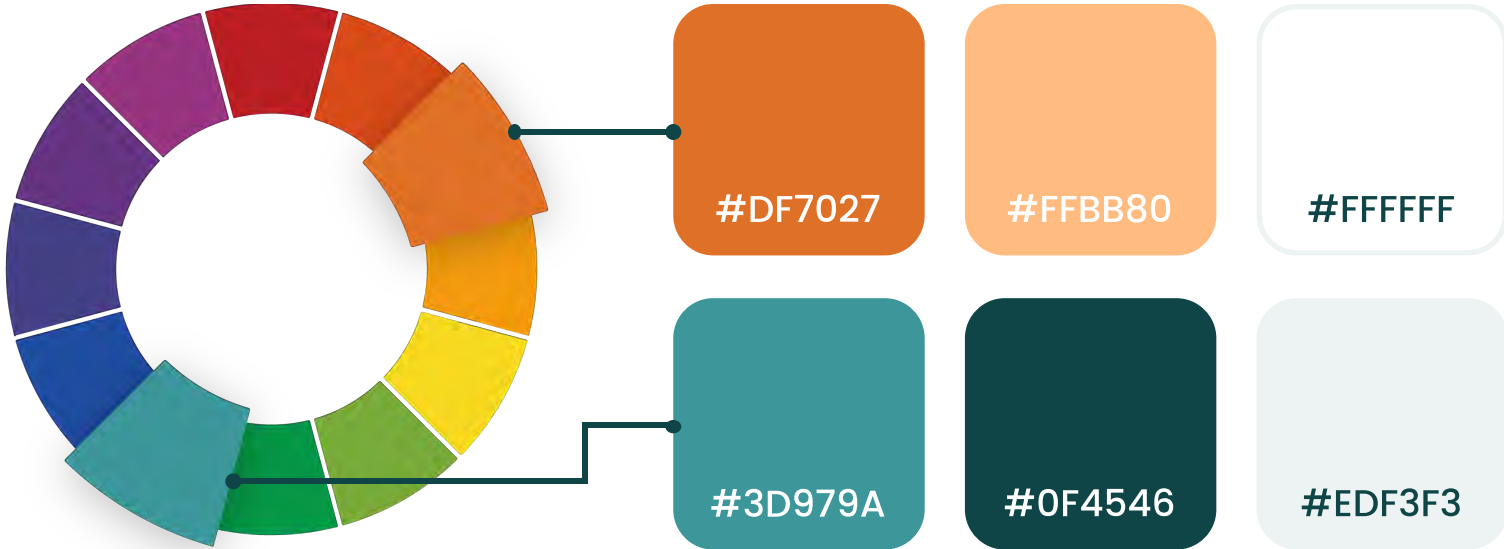

Building a brand identity.

Logo design.

The original logo was **not suitable** for display on a website, especially the navigation bar as it was a hand painted image. A **simplified version** was created by using Adobe Illustrator image trace to maintain the **most important visual element**.

Increased letter spacing was included to emphasise the word 'Breathe' and instil a **breathing appearance**.

Brand identity.

The client wanted to incorporate their existing primary turquoise brand colour as well as another primary colour to bring the site **alive** and convey an **energetic, active** aesthetic. Curved section dividers were introduced to create a sense of **fluidity** and **movement** within the page designs.

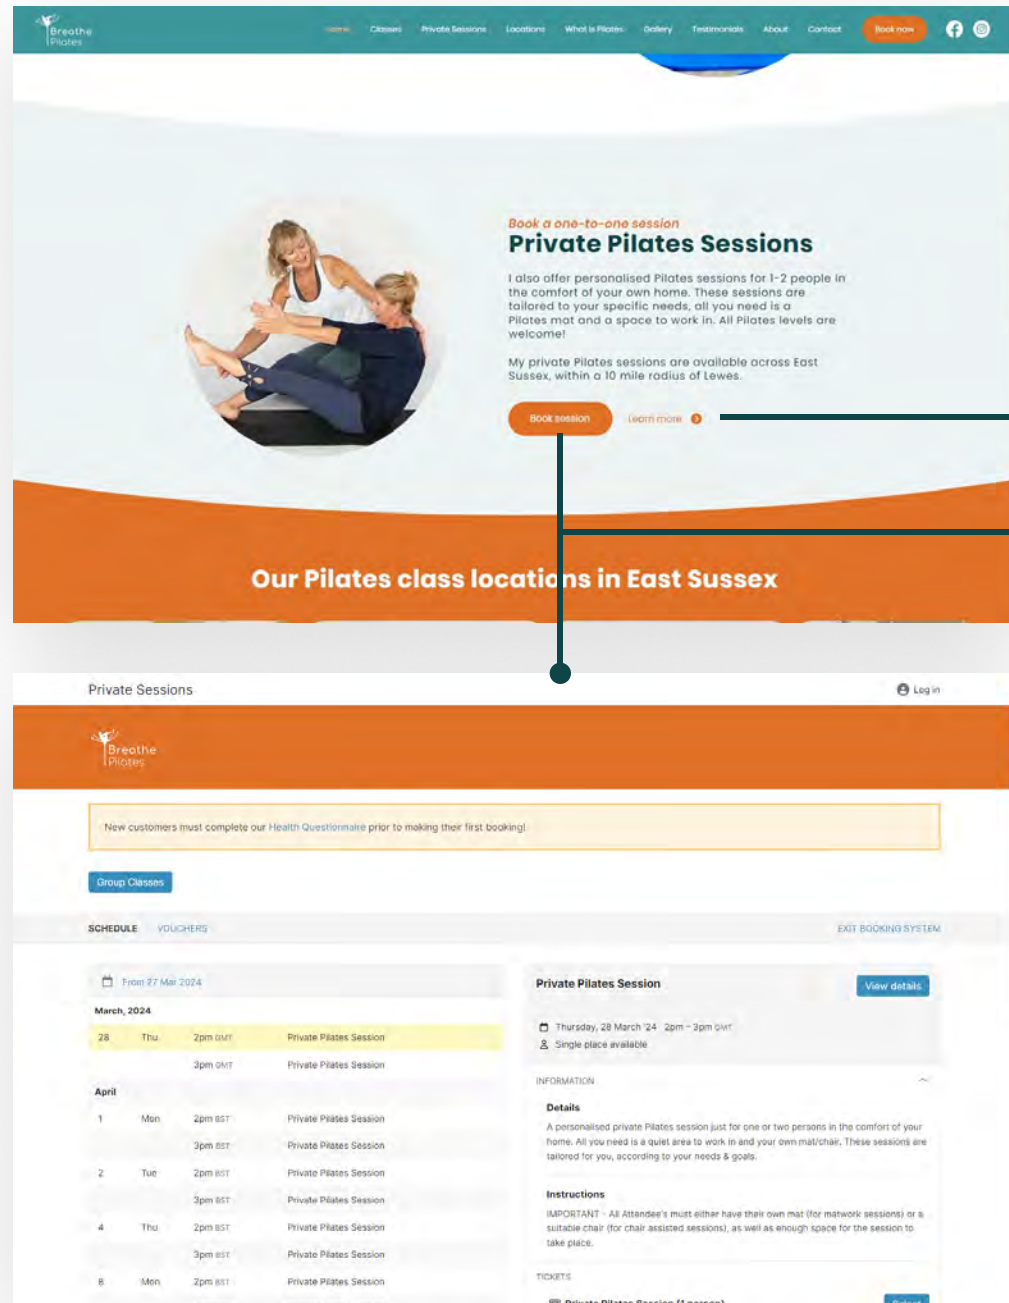

Key UX/UI elements.

Call-to-action.

The **main CTA** is to get users to land on the external **booking system** in order to book a class or session.

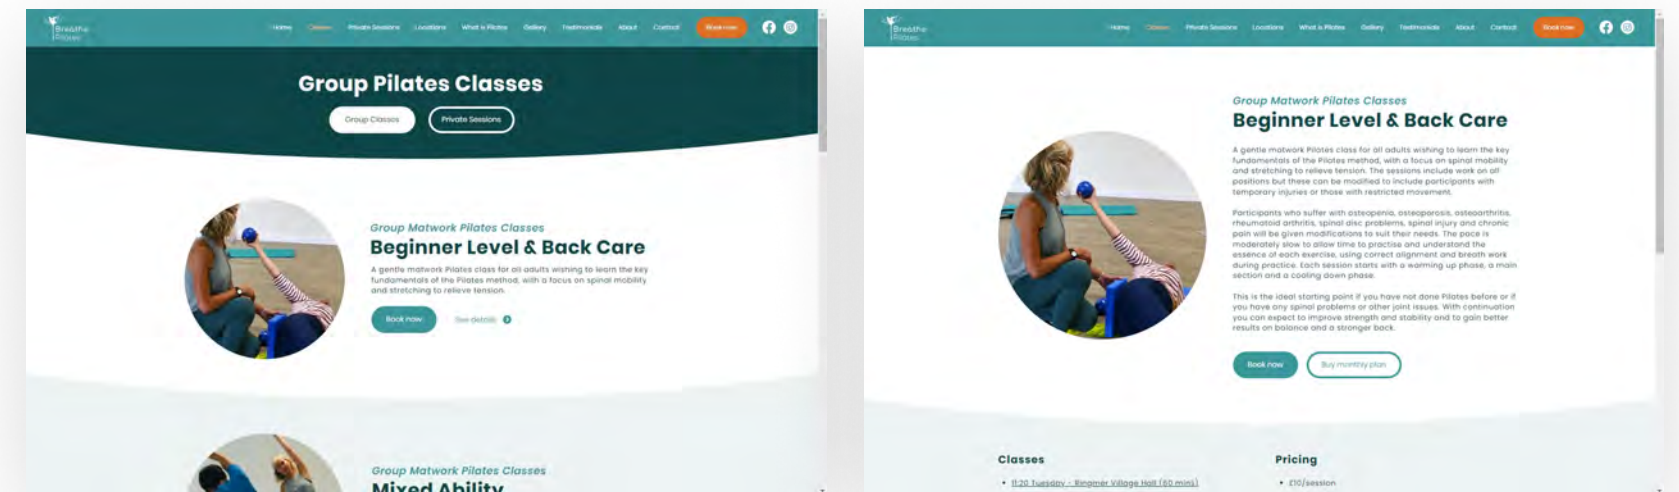

To achieve this, a **'Book'** button has been **prioritised** over the 'Learn more' buttons, and can be **found on each page** when users are learning about specific classes.

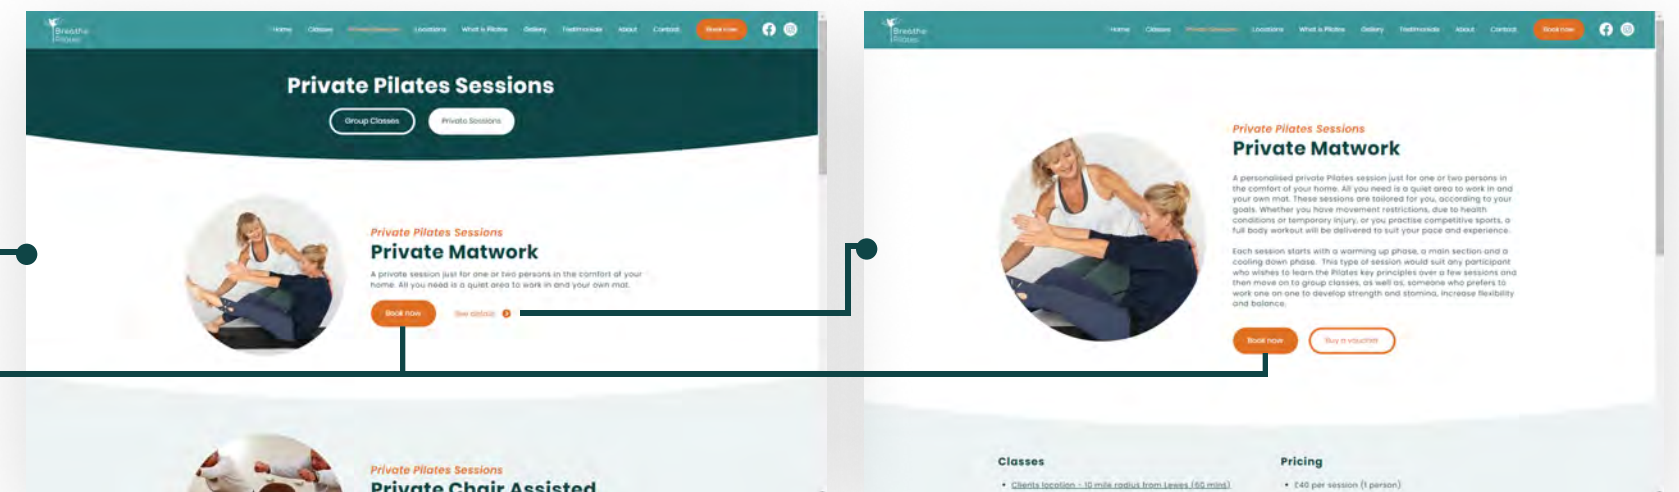

Reducing cognitive load.

The client offers a variety of different Pilates classes & private sessions. To help easily navigate the **different options**, an **individual accent colour** was implemented to **differentiate** between **classes** & **private sessions** and reduce cognitive load of the users.

The primary **turquoise/blue** colour was assigned to all **Group Classes**:

The primary **orange** colour was assigned to all **Private Sessions**:

Final outcomes.

Group Matwork Pilates Classes

Beginner Level & Back Care

A gentle matwork Pilates class for all adults wishing to learn the key fundamentals of the Pilates method, with a focus on spinal mobility and stretching to relieve tension. The sessions include work on all positions but these can be modified to include participants with temporary injuries or those with restricted movement.

Participants who suffer with osteopenia, osteoporosis, osteoarthritis, rheumatoid arthritis, spinal disc problems, spinal injury and chronic pain will be given modifications to suit their needs. The pace is moderately slow to allow time to practise and understand the essence of each exercise, using correct alignment and breath work during practice. Each session starts with a warming up phase, a main section and a cooling down phase.

This is the ideal starting point if you have not done Pilates before or if you have any spinal problems or other joint issues. With continuation you can expect to improve strength and stability and to gain better results on balance and a stronger back.

Book now Buy monthly plan

Classes

- 11:20 Tuesday - Ringmer Village Hall (60 mins)
- 11:50 Wednesday - Chiddingfold Village Hall (60 mins)
- 09:00 Saturday - Isfield Village Hall (60 mins)

Pricing

- £10/session
 - Purchase a monthly plan (£8/session)
- Book in advance to guarantee a space.
Please note that a no cancellation policy applies.

Hear from my clients

"I started going to weekly Breathe Pilates classes eight months ago - and I'm so glad I did. Marina is a brilliant teacher. Not only does she provide imaginative, fun classes with varied exercises, but she's also very encouraging and always thinks up adapted exercises for anyone who needs them. She's also kind and tactful, so you never feel silly, even if you're struggling to do an exercise. I would recommend her classes to anyone!"

Louise

"Marina is a lovely teacher explaining clearly how to do each exercise and how it helps us to stretch muscles, strengthen our core, breathe correctly, improve balance and stability and much much more. Everyone is encouraged to work at their level and enjoy the variety of exercises in each session."

- Margaret

"Following treatment for lower back, particularly sacroiliac-area pain, my osteopath advised Pilates. After trying other local classes I am very pleased to have found Breathe Pilates. Marina is a very considerate and engaged instructor - always carefully guiding the class on breathing, body posture and muscle control. Highly recommended."

- Alan

04. Other Projects

The Grape Exchange.

1 month ✕ 2 people ✕ Web design ✕ Clear all

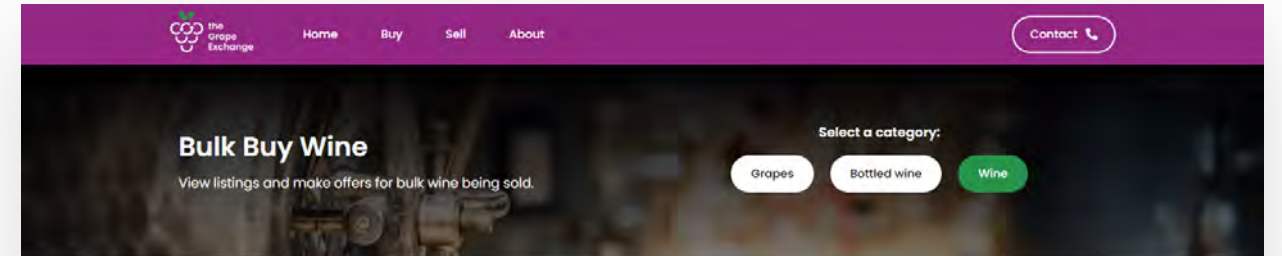

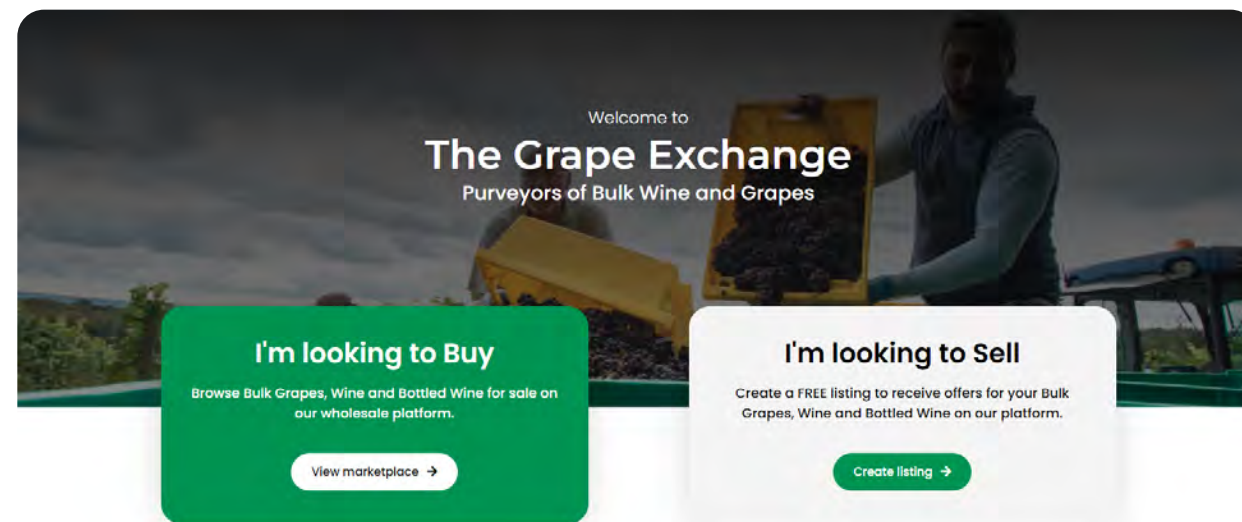

The Grape Exchange is a platform which aims to bridge the gap between buyers and sellers for trading vineyard produce. Reputable approved vineyard owners are able to list their bulk produce online for potential buyers to browse and propose financial offers.

User task flow.

Easy navigation.

The client wanted it to be easy for both new buyers and sellers users to navigate the website's 3 different types of produce (grapes, wine & bottled wine), depending on their requirements.

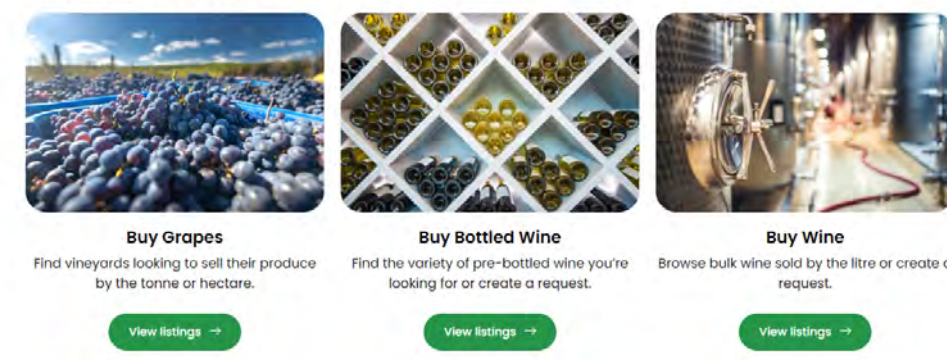

Sort by [v] X Clear Filters

Product name	Vintage	Volume (L)	Price (per litre)	Product	County	Organic	Action
Seyval Blanc Bulk Wine	2023	10,000L	£2.00	Seyval Blanc	West Sussex	No	View
Seyval Blanc Bulk Wine	2023	7,700L	£2.00	Seyval Blanc	West Sussex	No	View
Divico Blending Bulk Wine	2023	100 litres	£12.00	Divico	Kent	No	View
Reichensteiner Bulk Wine	2023	5,000 litres	£2.48	Reichensteiner	Kent	No	View

How does it work?

- 1. Browse listings**
Select a product category to view listings from verified sellers.
- 2. View listing details**
Seen something you like? Click to see more information about the product. If necessary, contact us for more information.
- 3. Make an offer**
Place an offer on wine. This will be sent to The Grape Exchange and the seller will be notified of your offer.
- 4. Complete the sale**
If the seller chooses to accept your offer, you will receive an email confirming this. The Grape Exchange will arrange contracts accordingly.

The Vineyard Store.

2 months × 2 people × Web design × Clear all

This project was to redesign an outdated vineyard supplies e-commerce store in order to better compete with their competitors who had recently invested in upgrading their website. The client wanted to establish a stronger brand identify as well as an easy to use website with the hope of further expanding their customer base further from just their existing industry connections.

The site was built from scratch on WordPress with WooCommerce, enabling tiered pricing, stock monitoring and customised shipping options dependant on weight or item quantities.

Since the launch:

#1 SEO rank for most products

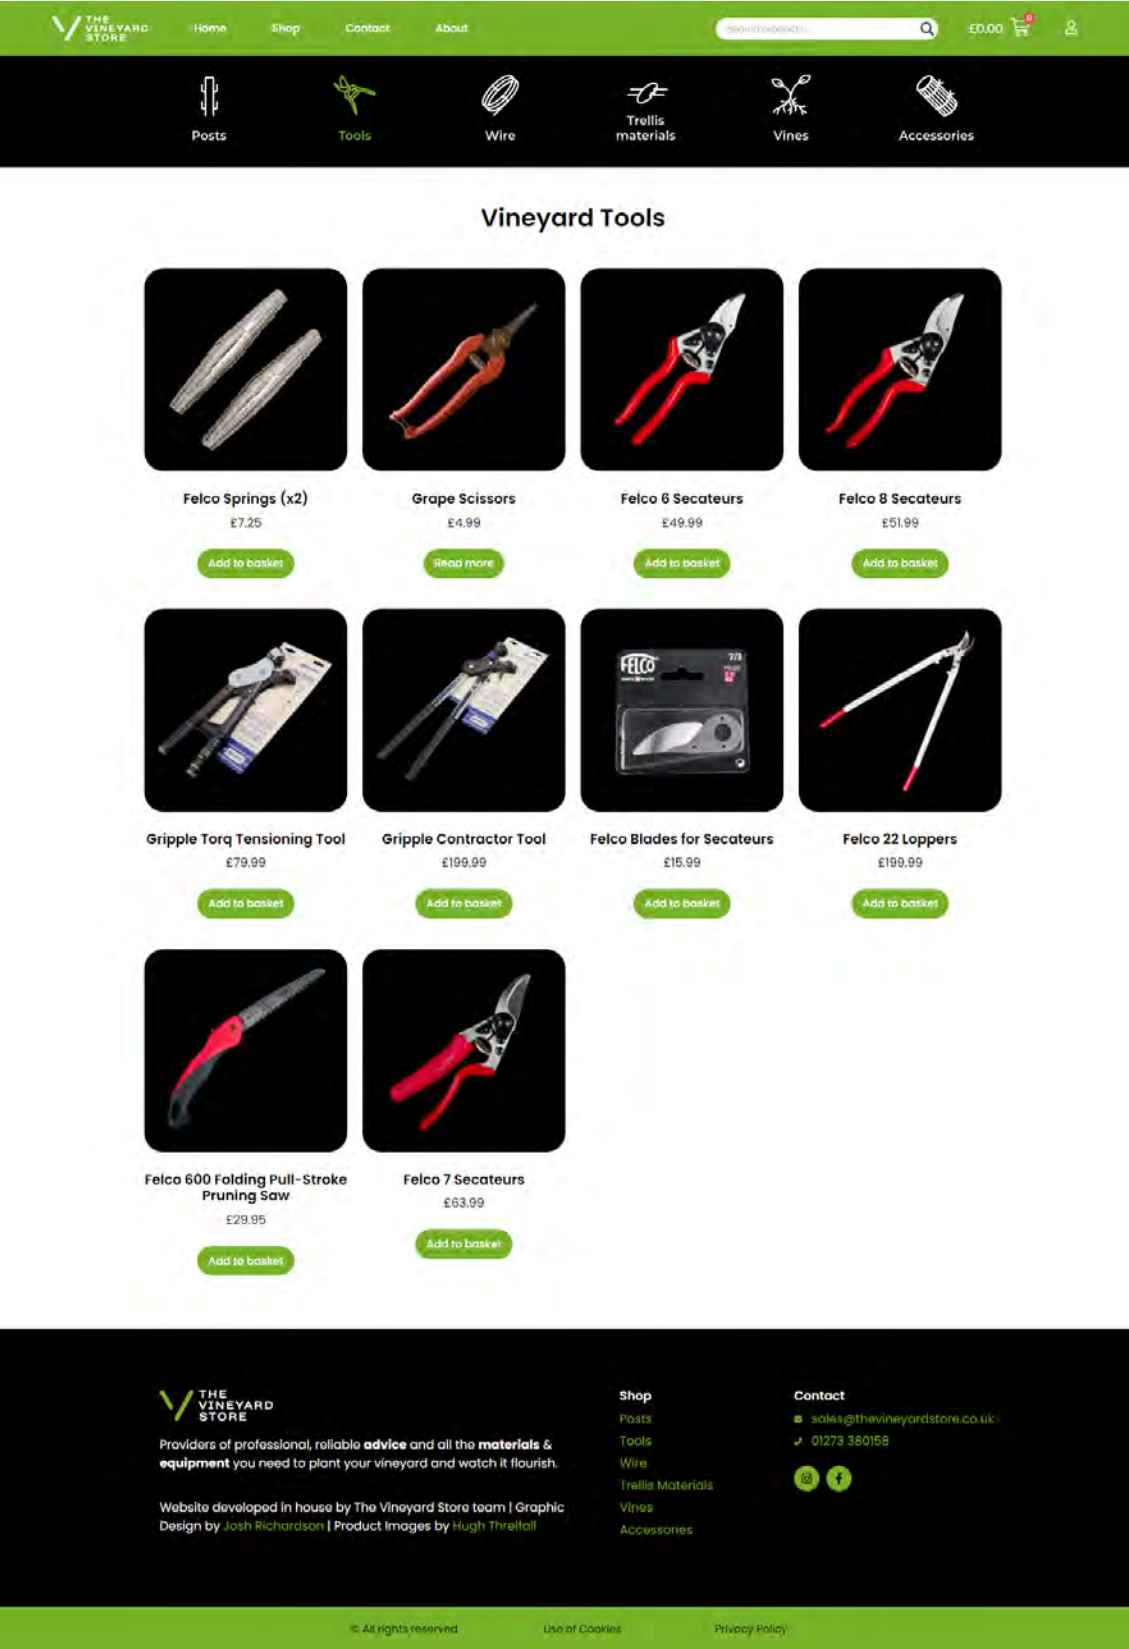

Daily sales instead of weekly

Increased organic web sales

New repeat customers

theUp.co Internship.

12 months ✕

Creative designer ✕

Hybrid ✕

Clear all

During my **placement year** at Loughborough University, I worked as a **creative designer** at **theUp.co**, a tech start-up in the hospitality sector. My time was predominantly spent across different 3 segments:

ChargedUp

A portable phone charging network where users can rent a phone battery and drop off to other charging stations.

ServedUp

A QR code mobile ordering platform for bars, pubs and food vendors, as well as installing EPOS devices & systems.

BrandUp

A platform to enable brands and hospitality venues to seamlessly partner for exclusive deals.

About my role

My role was to assist all parts of the business by producing both **digital** and **physical assets** for marketing, sales, and customer success departments, as well as working closely alongside the development team for the ServedUp platform. I got work alongside brands such as **Guinness**, **Tanqueray**, **Smirnoff**, **Corona** to provide digital promotional assets for BrandUp campaigns.

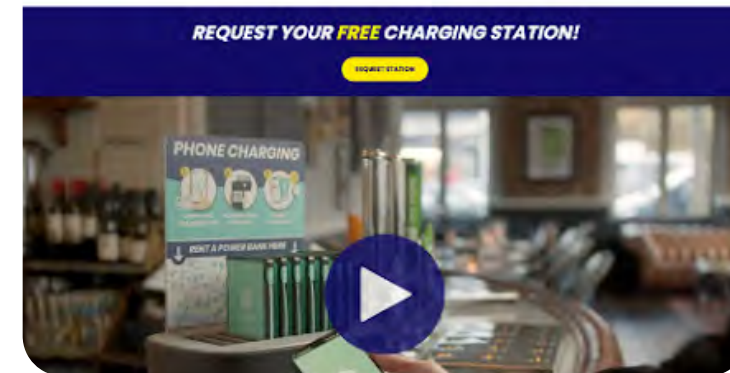

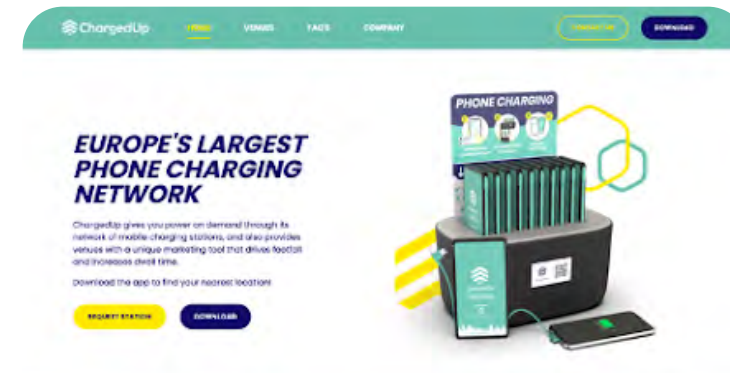

Some examples of work include: Website design & maintenance, print material & packaging design, vector animated explainer videos, sales & pitch decks, product renderings and much more.

florere *(to flourish in Latin)*

2 months X

Group X

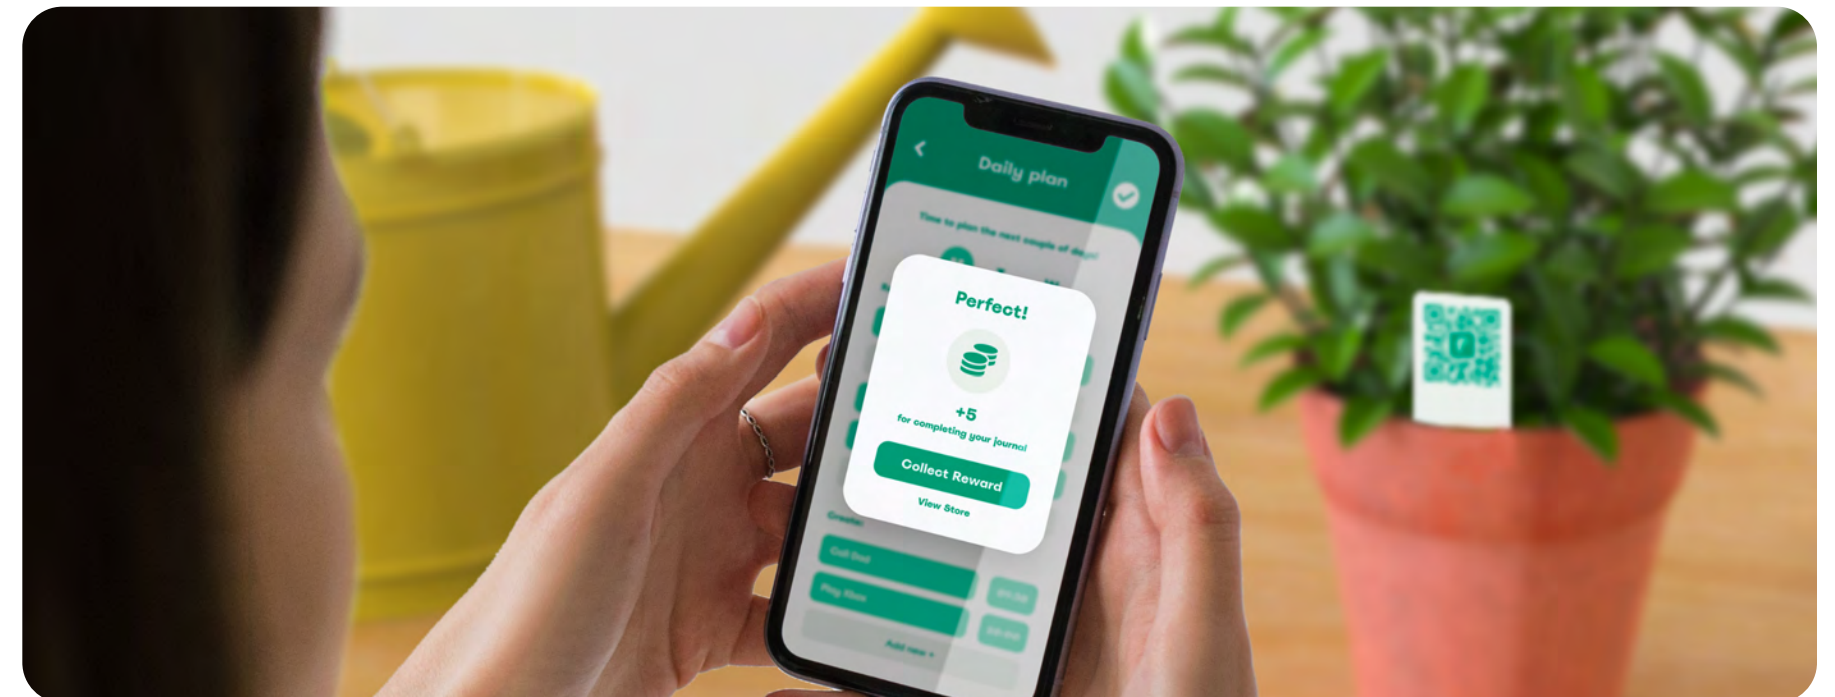

System design X

Clear all

Due to the current stress on the NHS, **43% of people** have said their **mental health has declined** as a result of long wait times for mental health related services. The concept of Florere grew from 2 key insights being, that **‘people often create healthy routines for their plants rather than themselves’**, and that **‘everyone has their own personal methods of dealing with issues’**.

Florere helps **identify & reinforce positive habits** like going to the gym, through the **upkeep of a companion plant**. When their plant needed watering, the user would spend a short period journaling and scheduling tasks to help relieve stress. Users are rewarded for completing tasks to help develop healthy behaviours while waiting for NHS services. The low cost product enables users to pass on their plant to others once they have received the help they need, enabling a generational product lifecycle.
